c. ERROR / FAILURE statuses signalled by the APP	26

1. Introduction

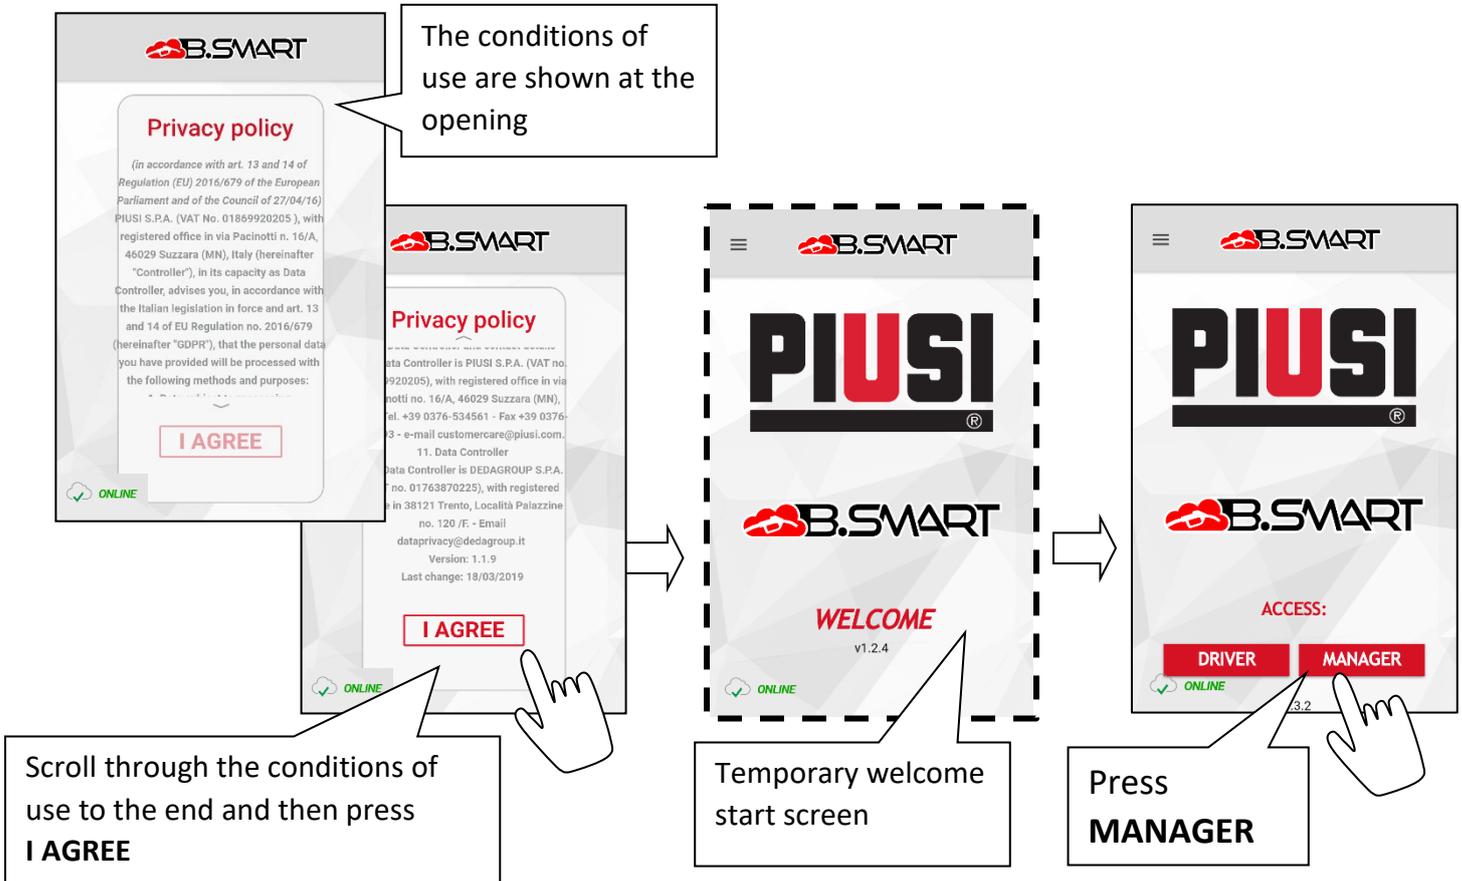

The APP is compatible with iOS and Android operating systems and can be downloaded from the Google Play Console and App Store. It can work with 3G/4G or Wi-Fi data connection, for some features it can work also without data connection, in particular: manager authentication, calibration, dispenser firmware update, driver dispensing and ticket display.

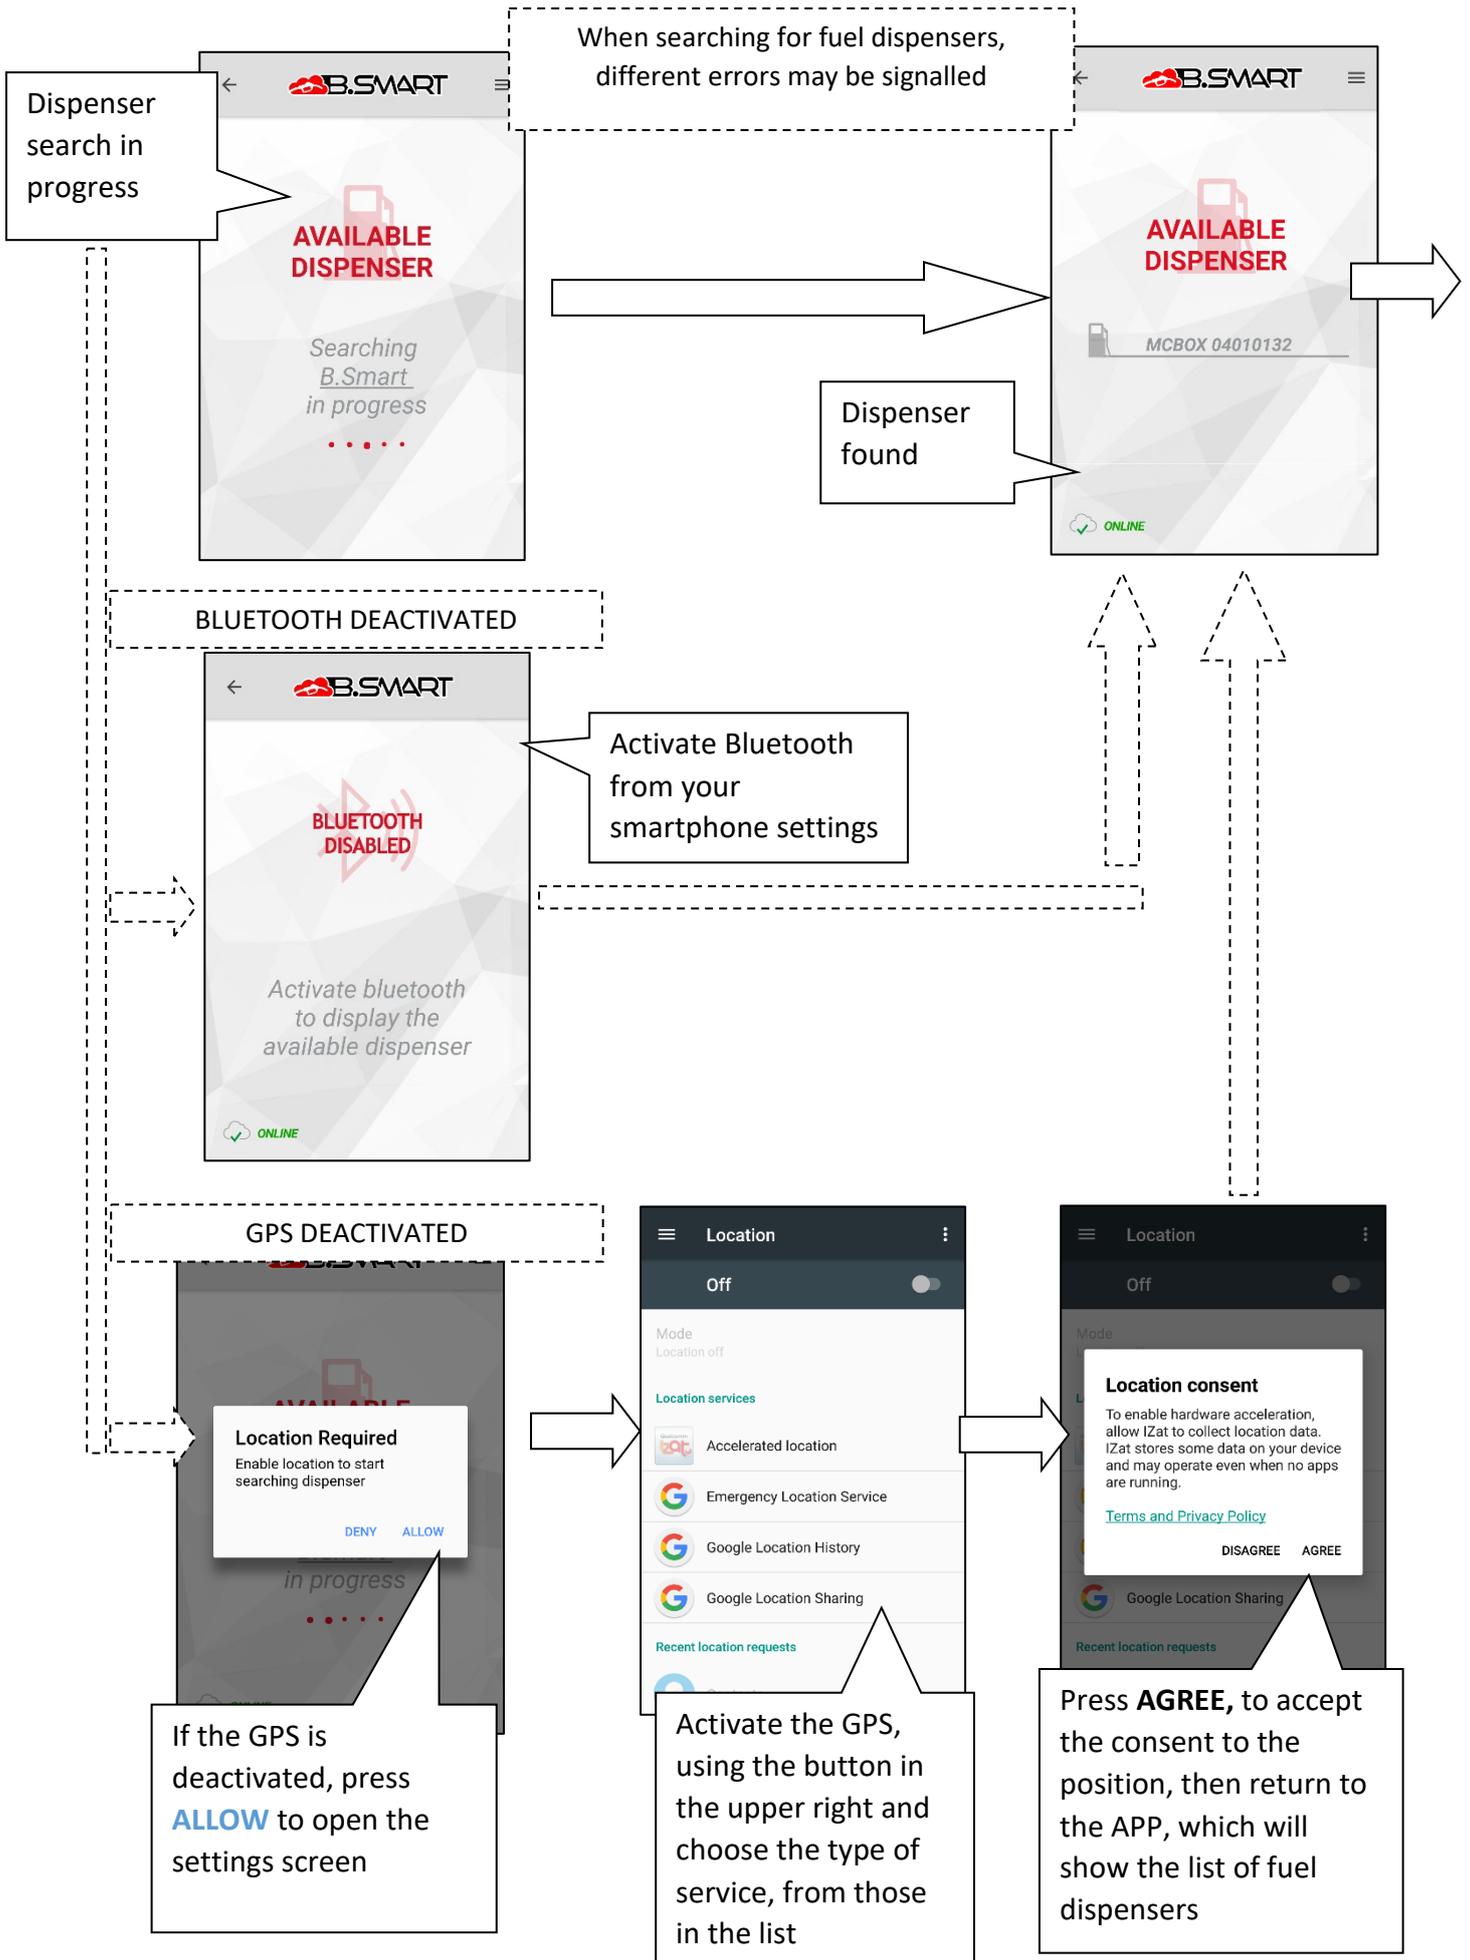

To check if the APP is connected to the mobile network there is an indicator at the bottom left of the display that indicates:

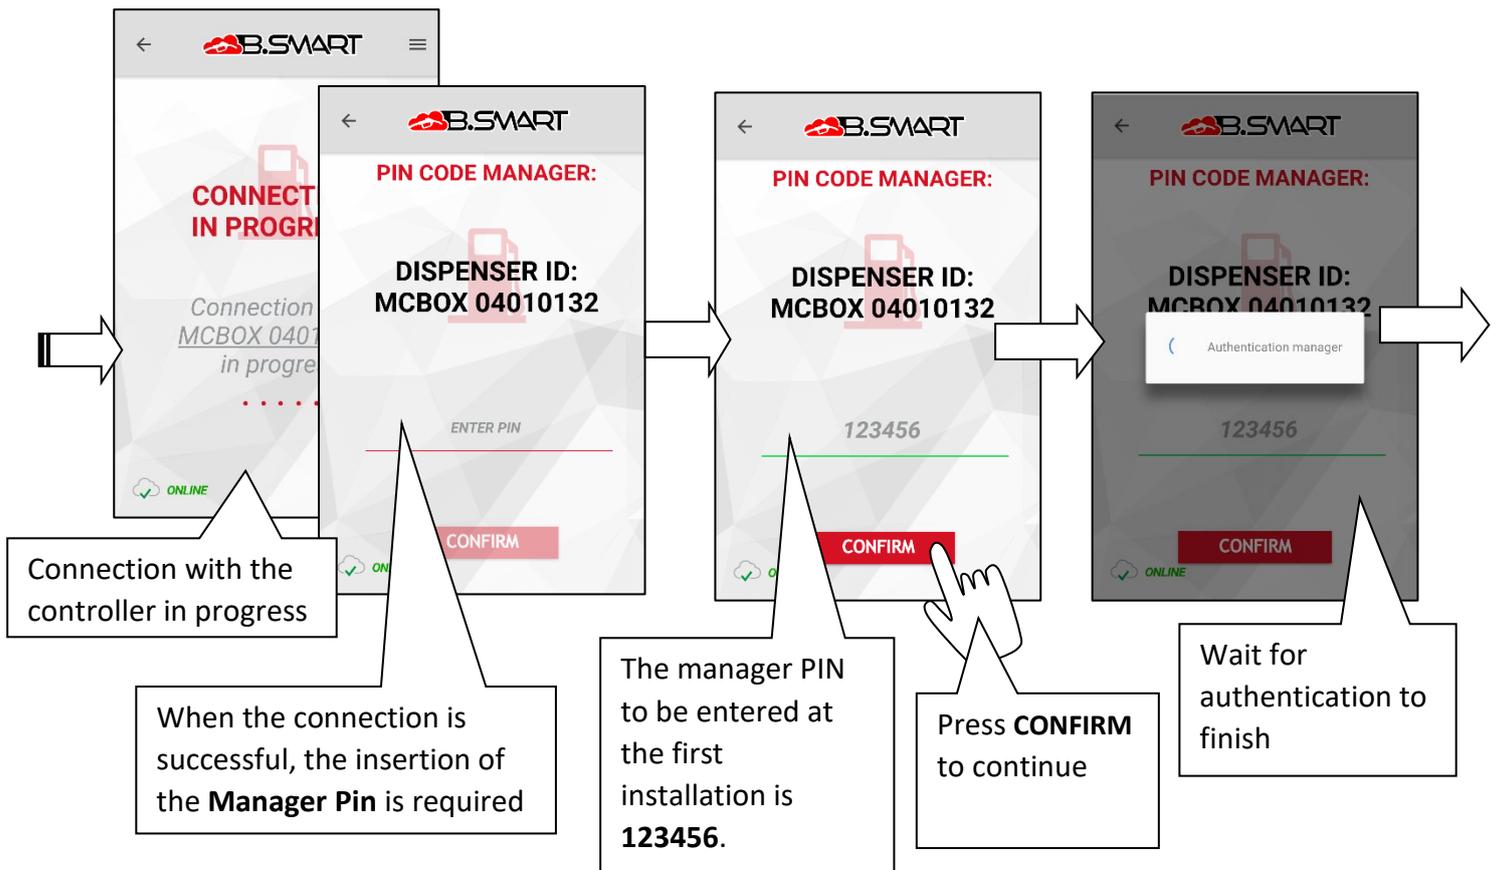

- OFFLINE:  APP/smartphone not connected to 3G/4G or Wi-Fi
- ONLINE:  APP/smartphone connected to 3G/4G or Wi-Fi

2. Manager

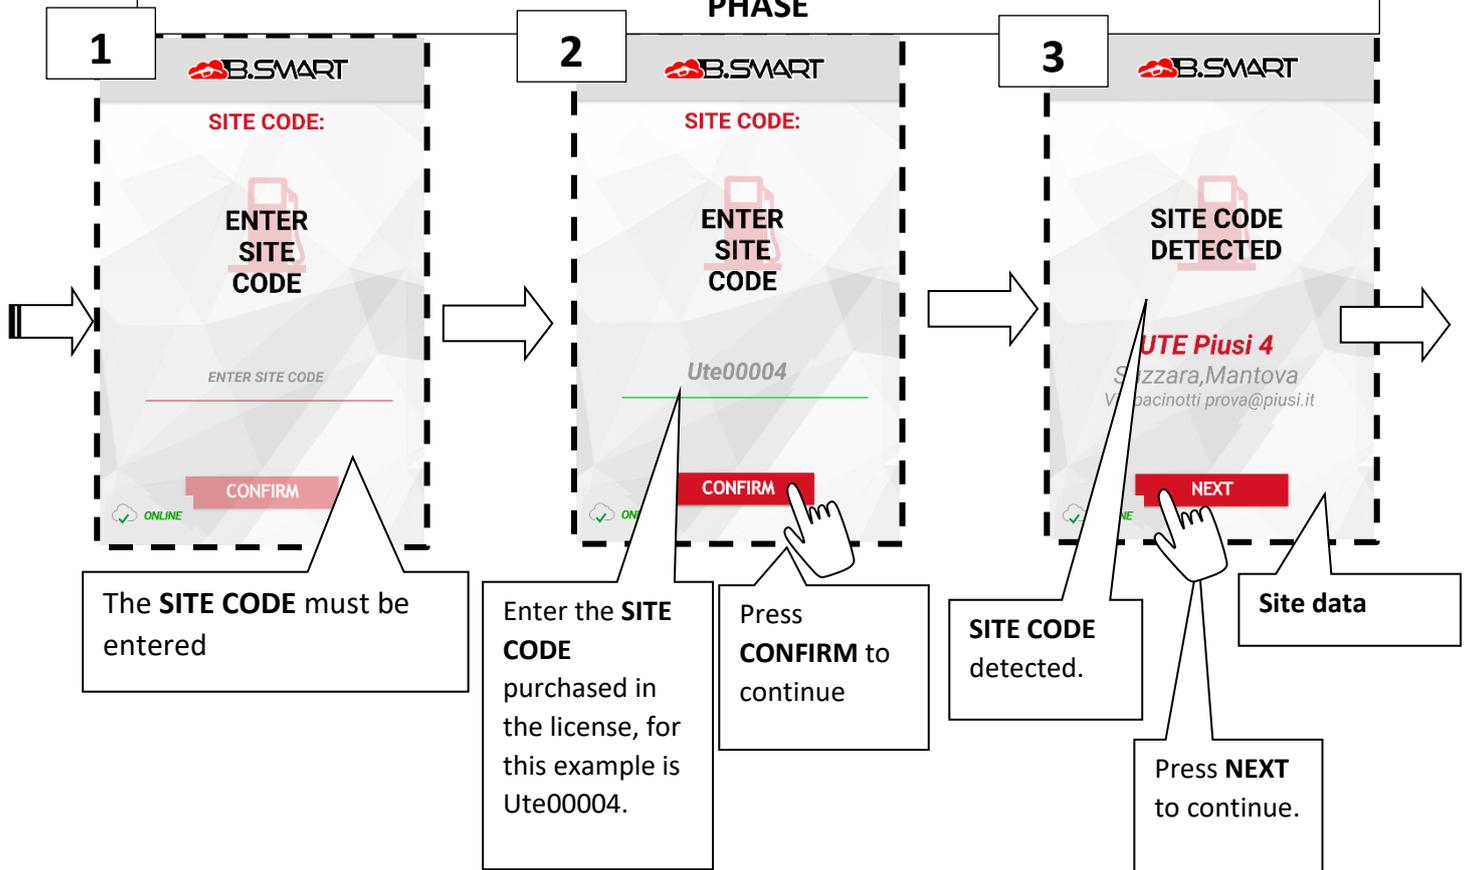

a. Authentication - Discovery phase

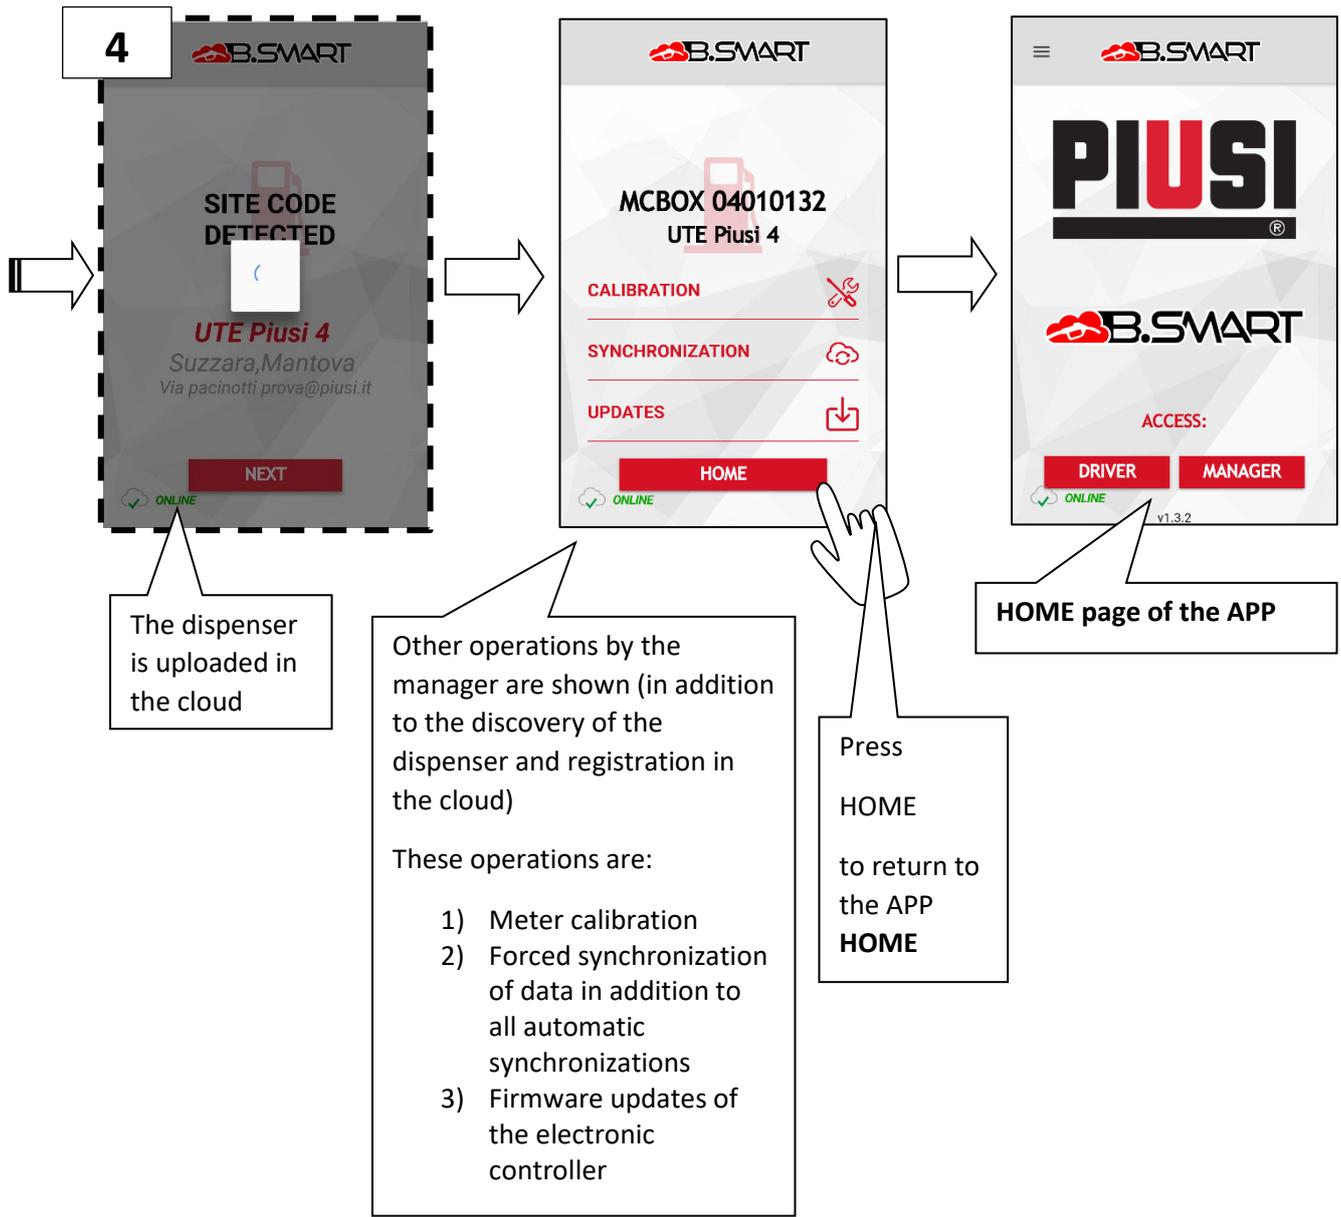

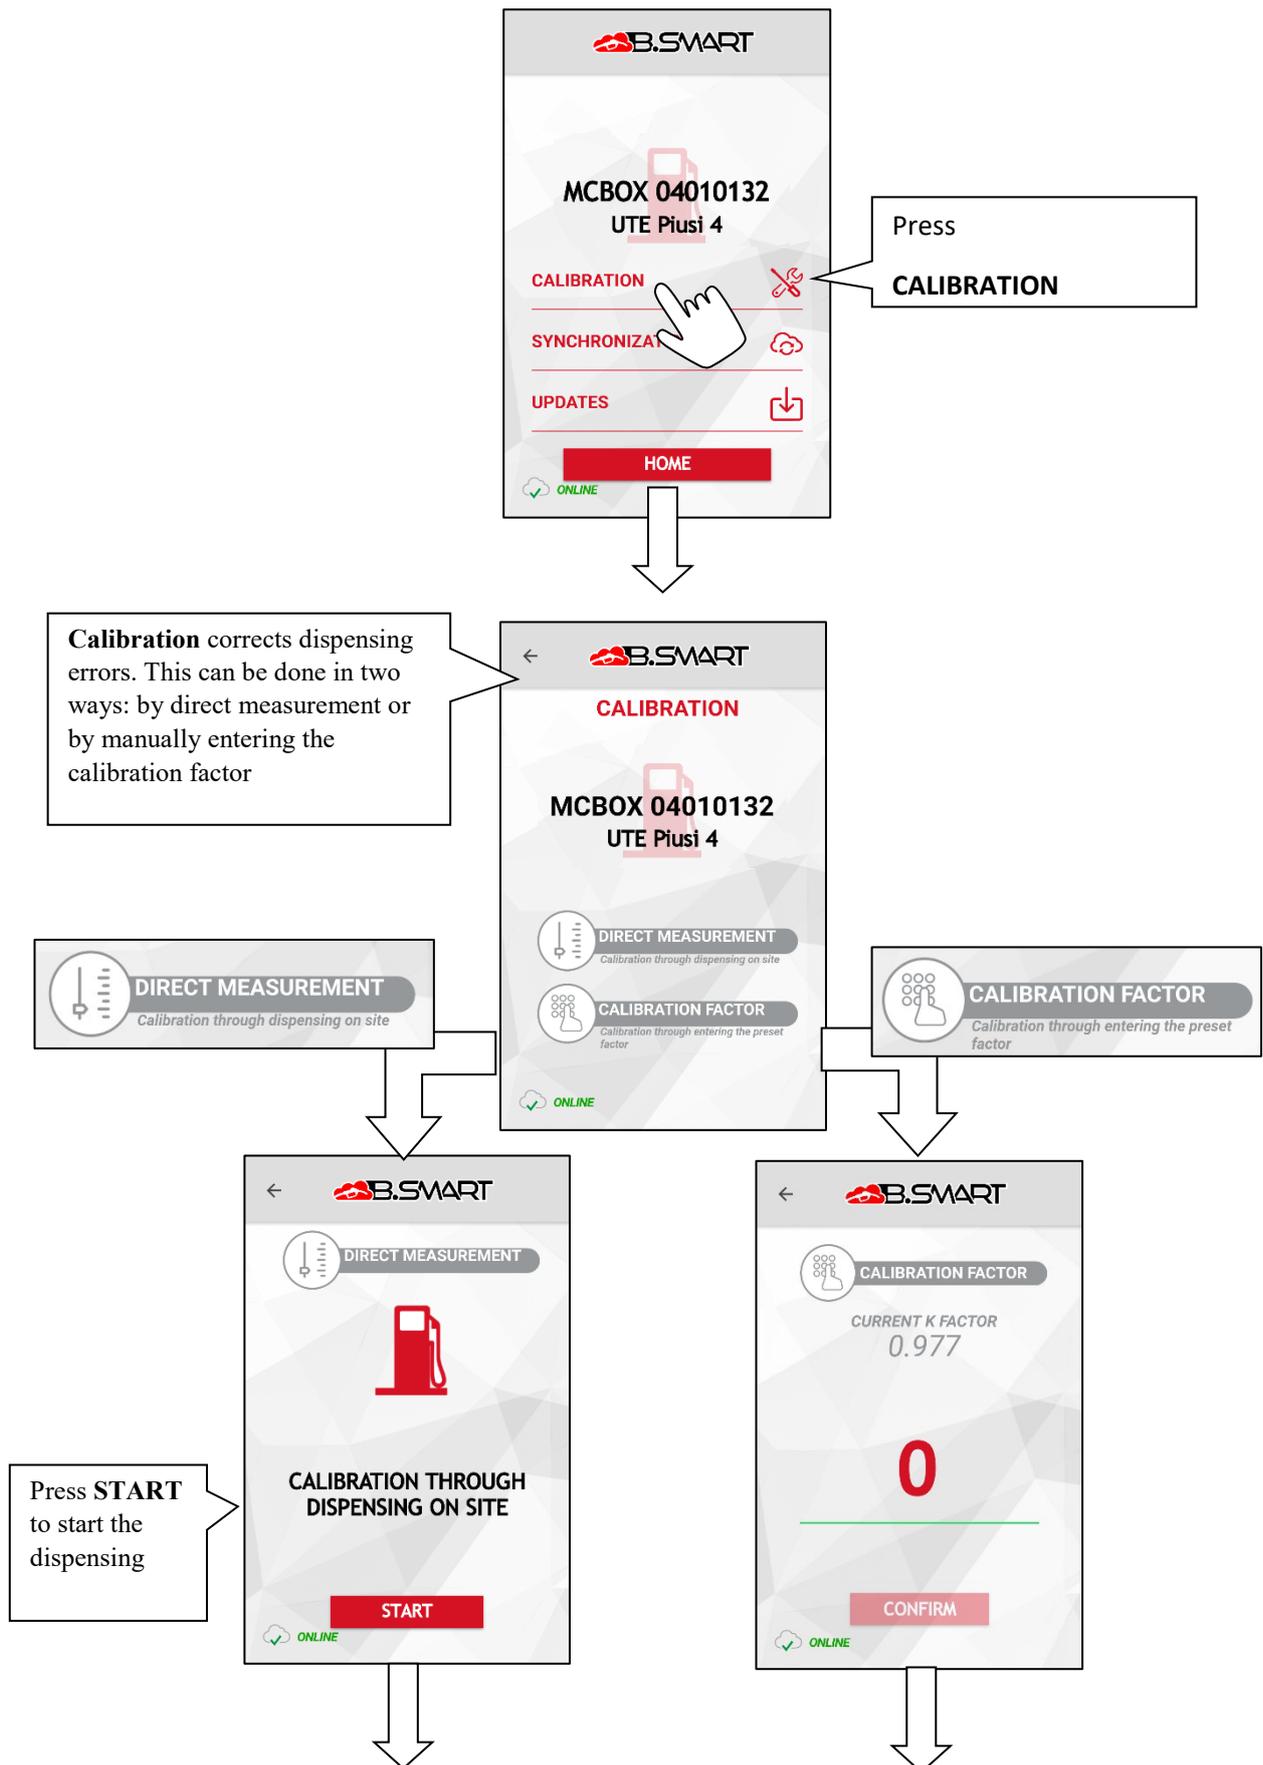

THESE 4 CONSECUTIVE SCREENS ARE PRESENT ONLY IN THE DISCOVERY PHASE

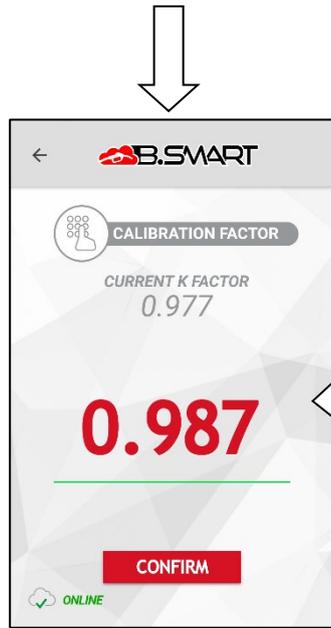

b. Calibration: direct measurement and calibration factor

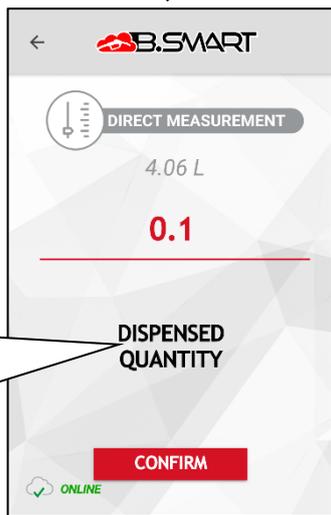

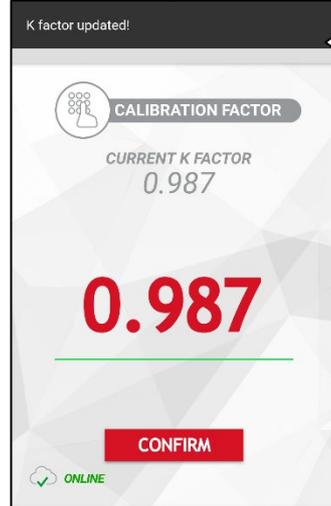

Press **STOP** to finish dispensing

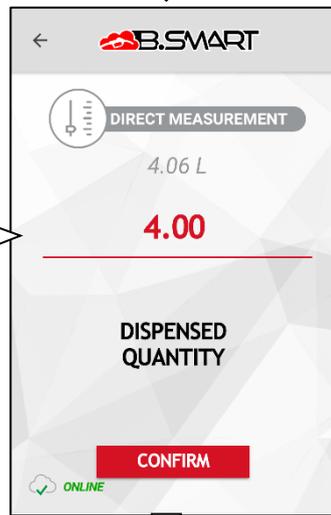

Enter the calibration factor manually and press **CONFIRM**

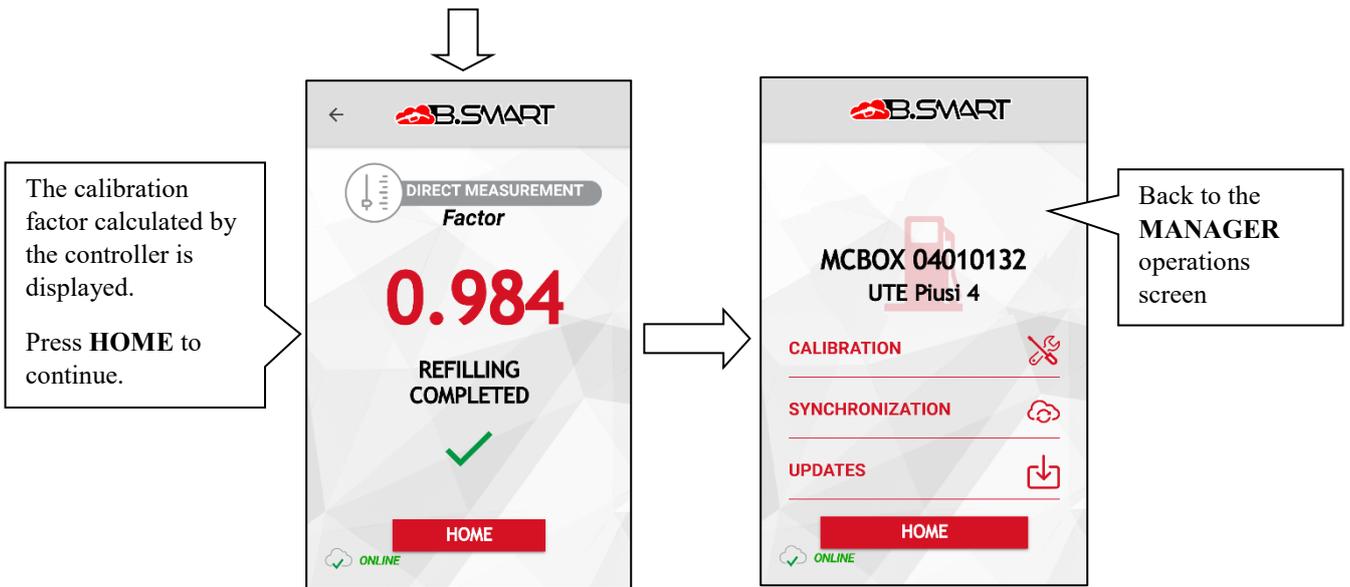

Enter the quantity actually dispensed, measured by your measuring instrument (capacity meter or other)

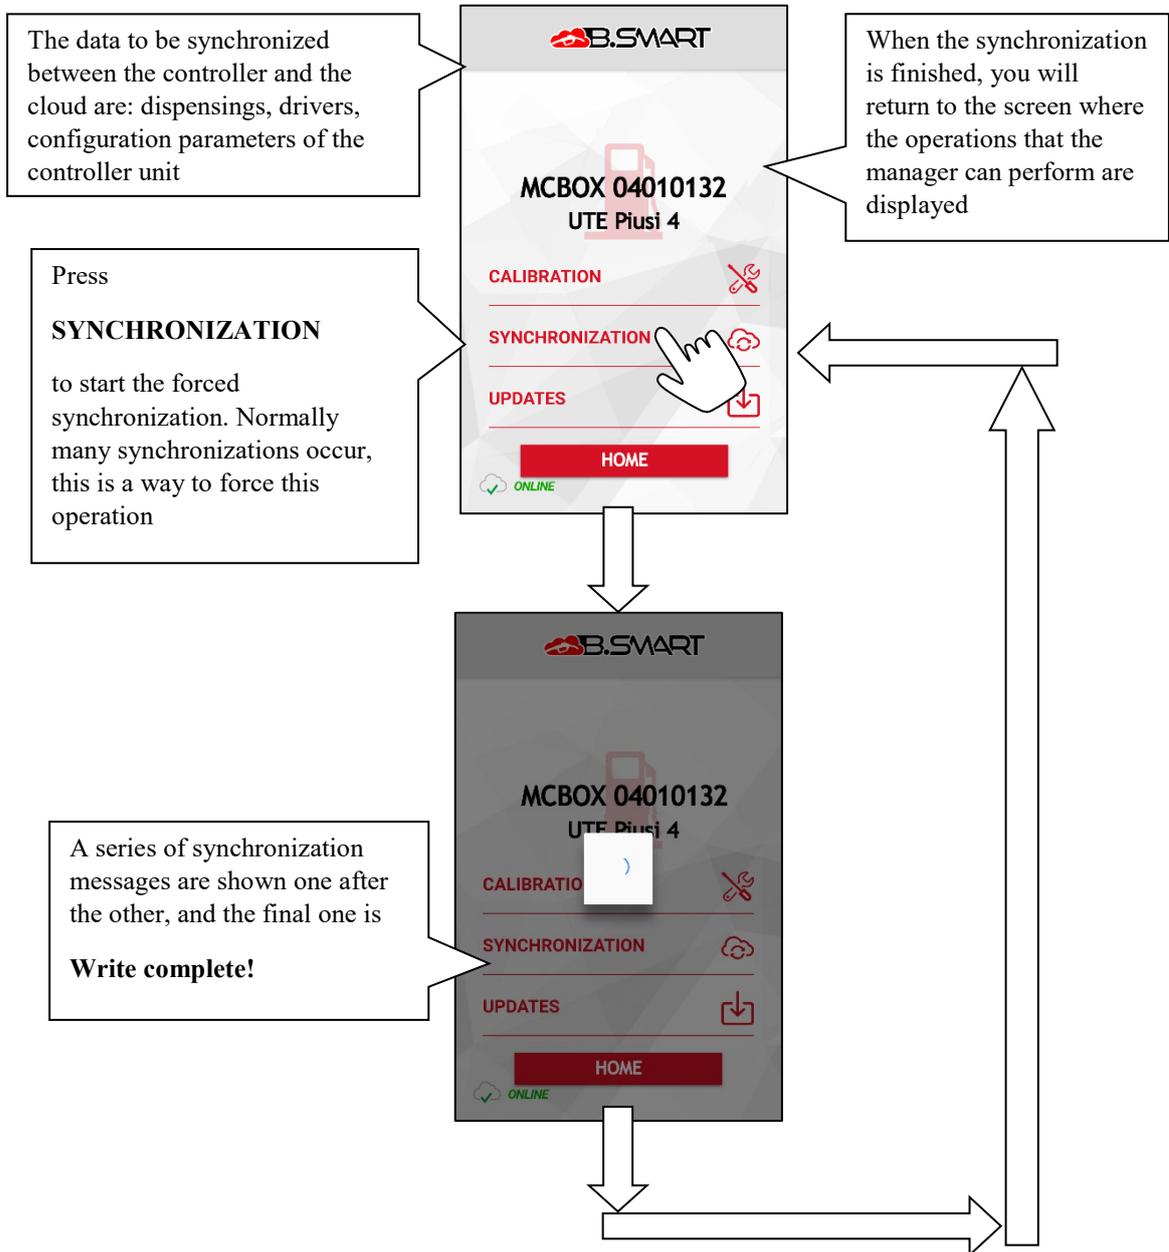

The calibration factor K has been successfully saved

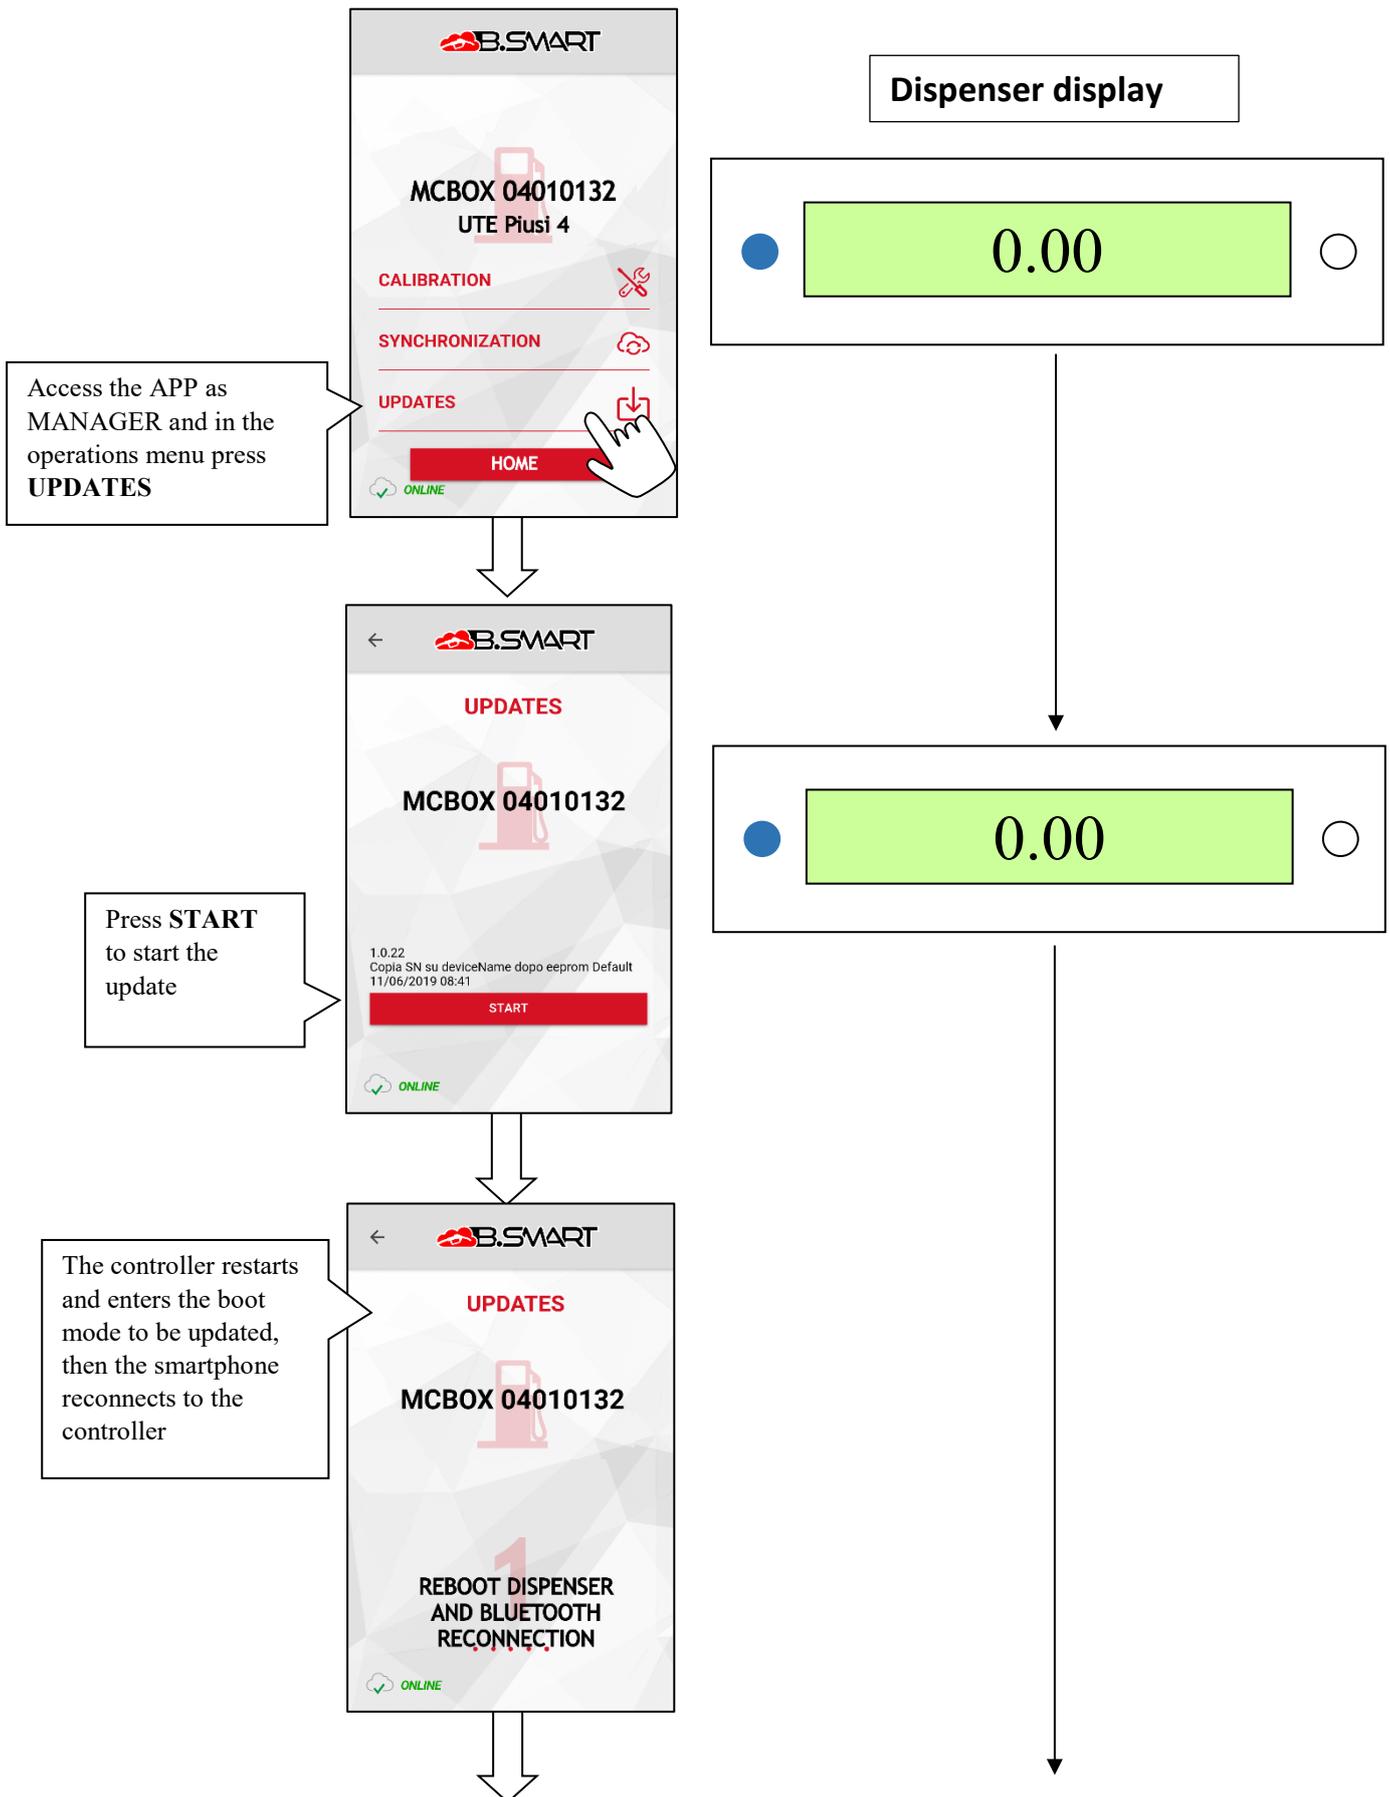

Quantity entered, press **CONFIRM** to continue

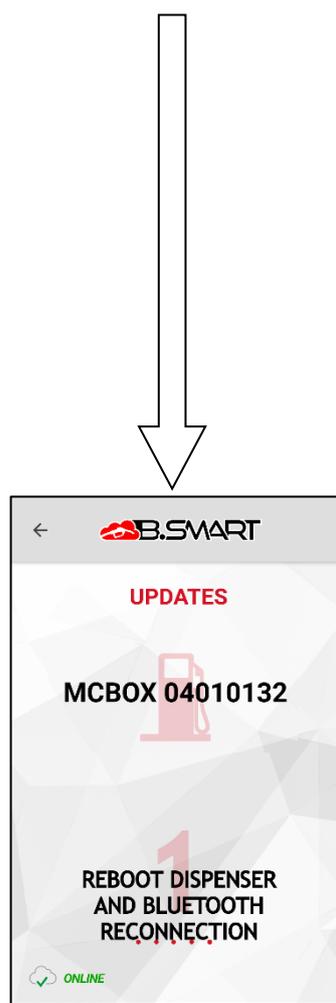

c. Synchronization (forced)

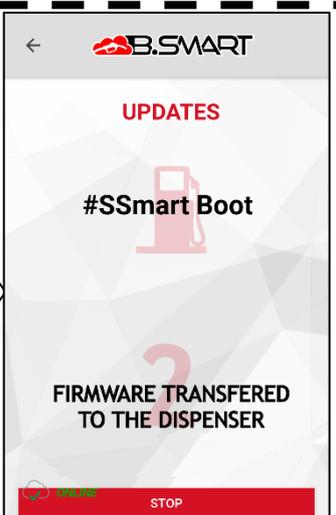

d. Dispenser firmware update

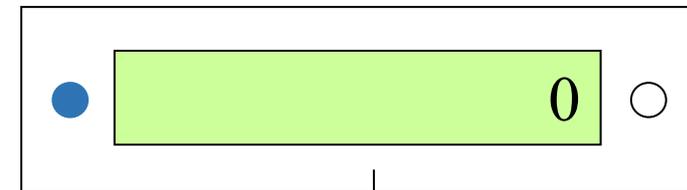

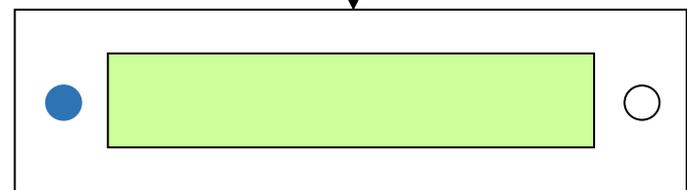

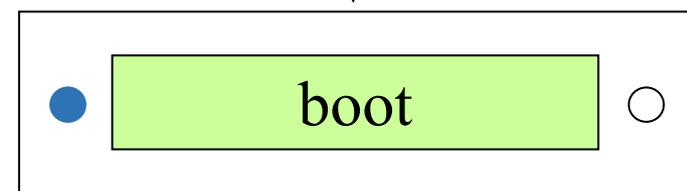

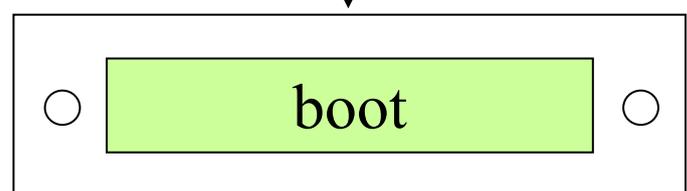

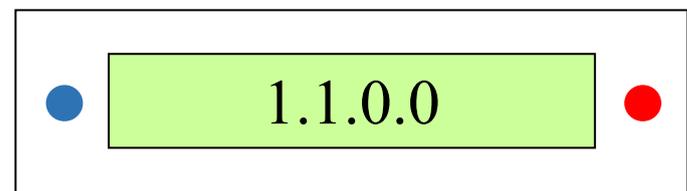

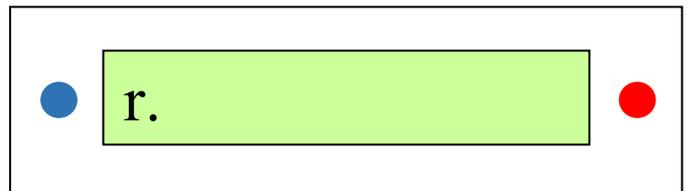

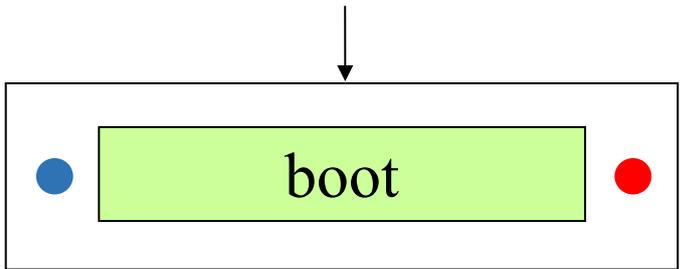

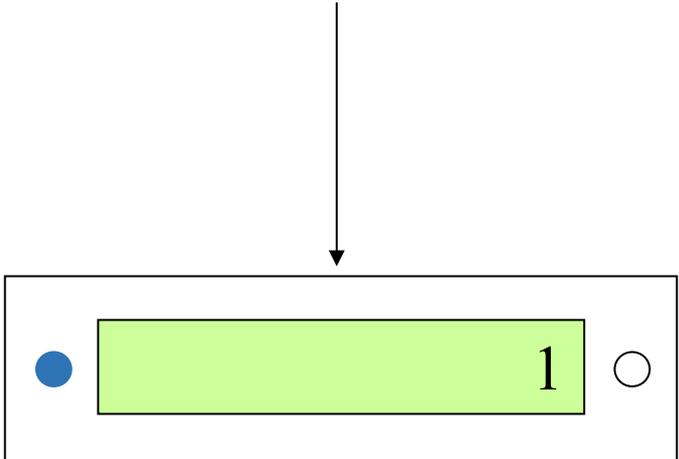

Now the controller is in boot mode, which allows you to receive firmware from your smartphone

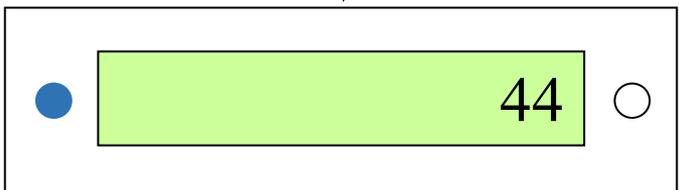

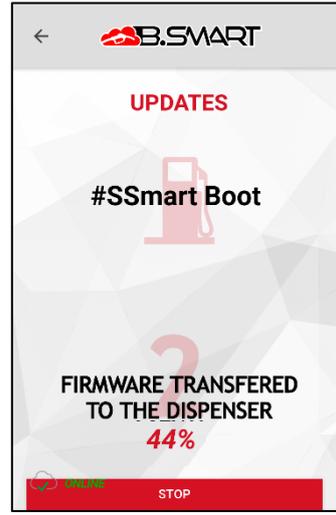

Data transfer starts: the percentage of firmware that is loaded from APP to controller is shown both on the APP and on the display of the controller

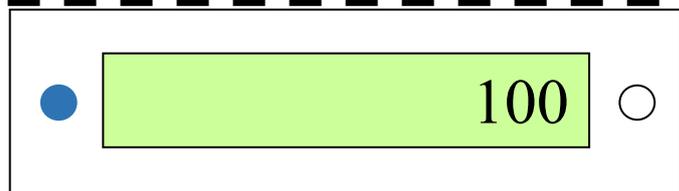

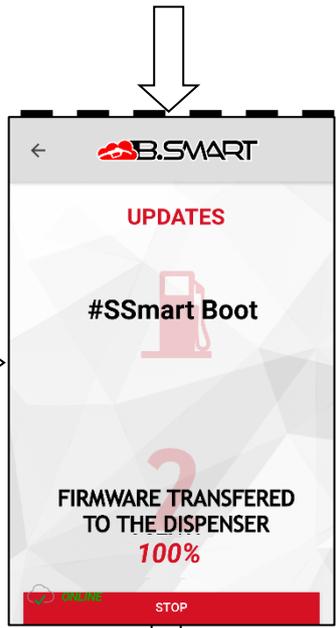

The percentage shown by the APP is also shown on the display of the controller

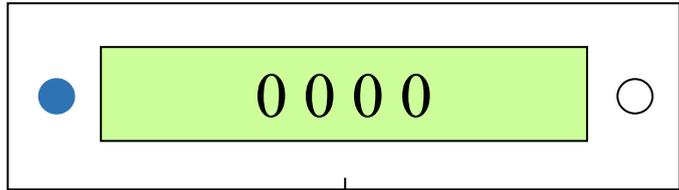

The firmware transfer can be interrupted at any time by pressing STOP

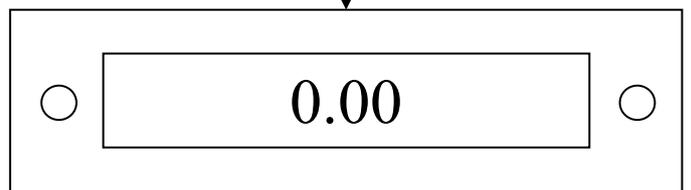

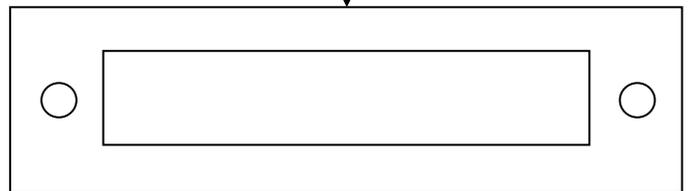

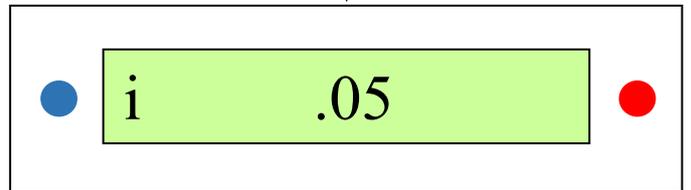

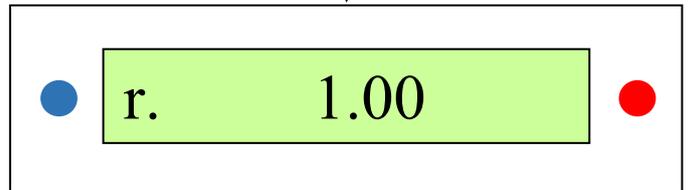

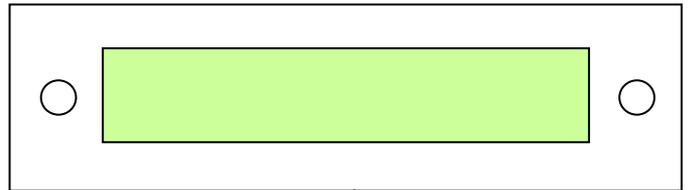

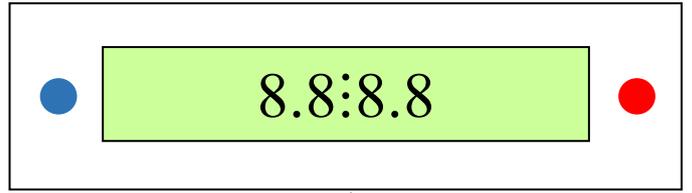

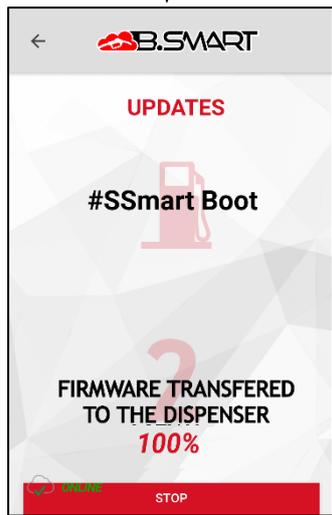

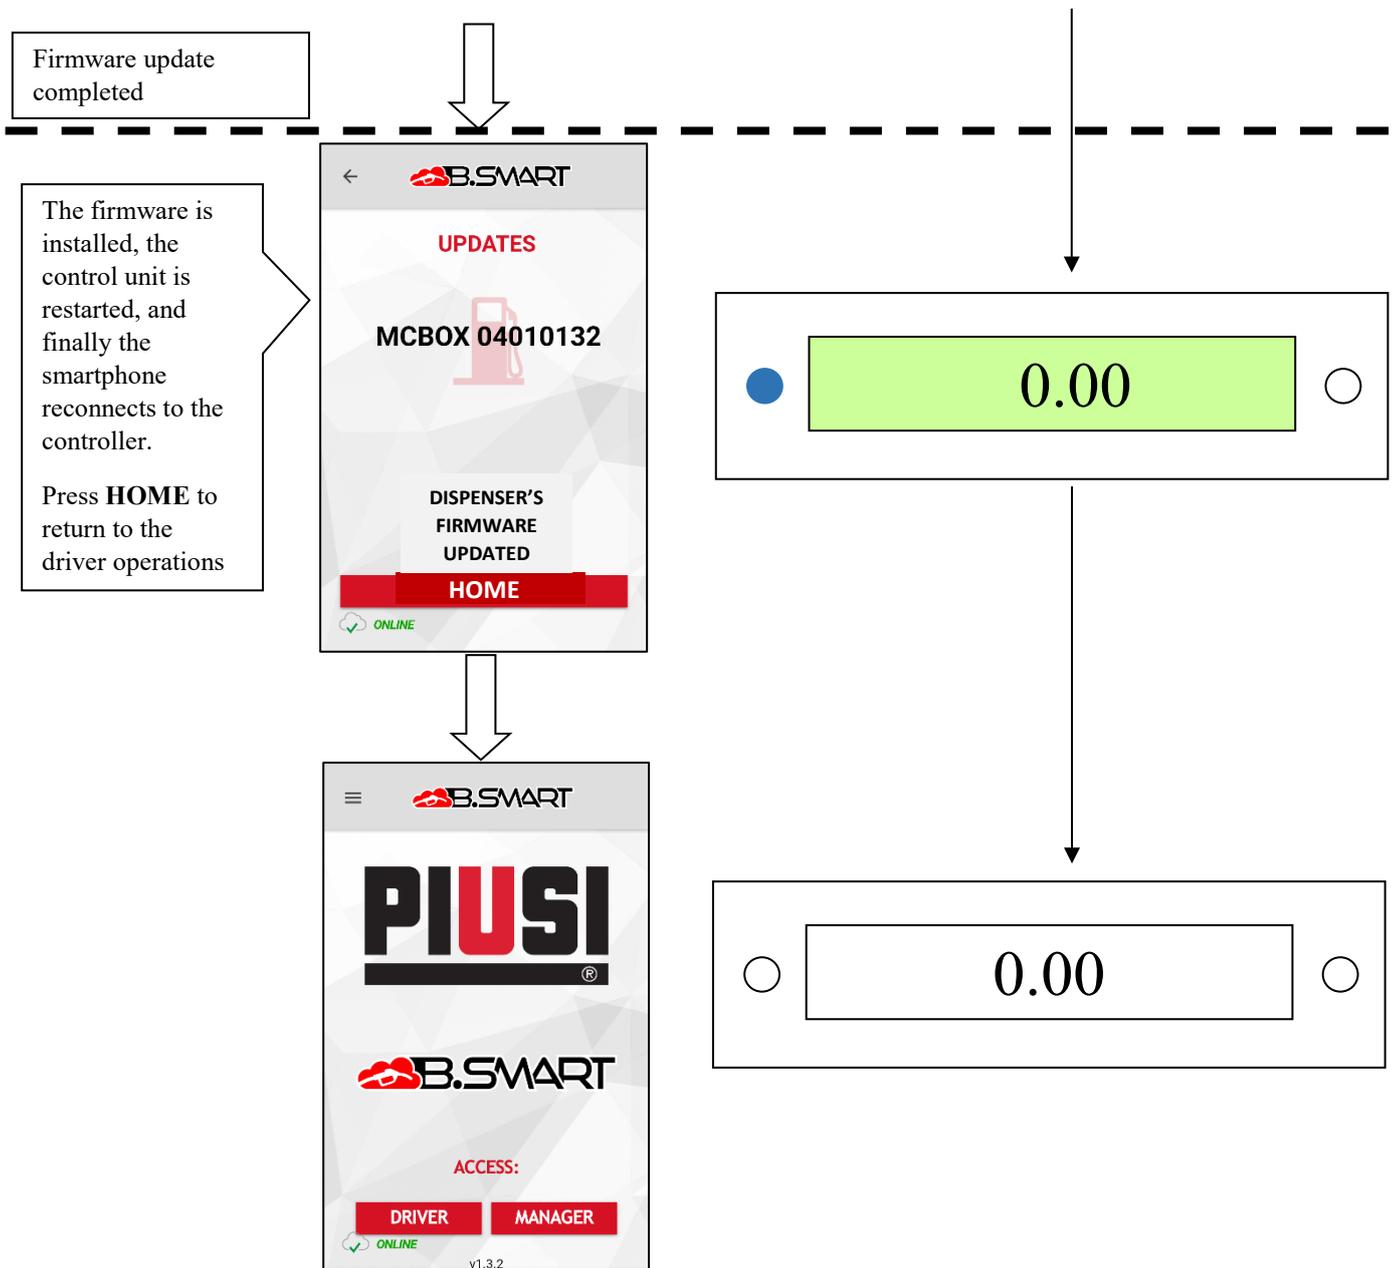

Firmware transfer from APP to controller completed

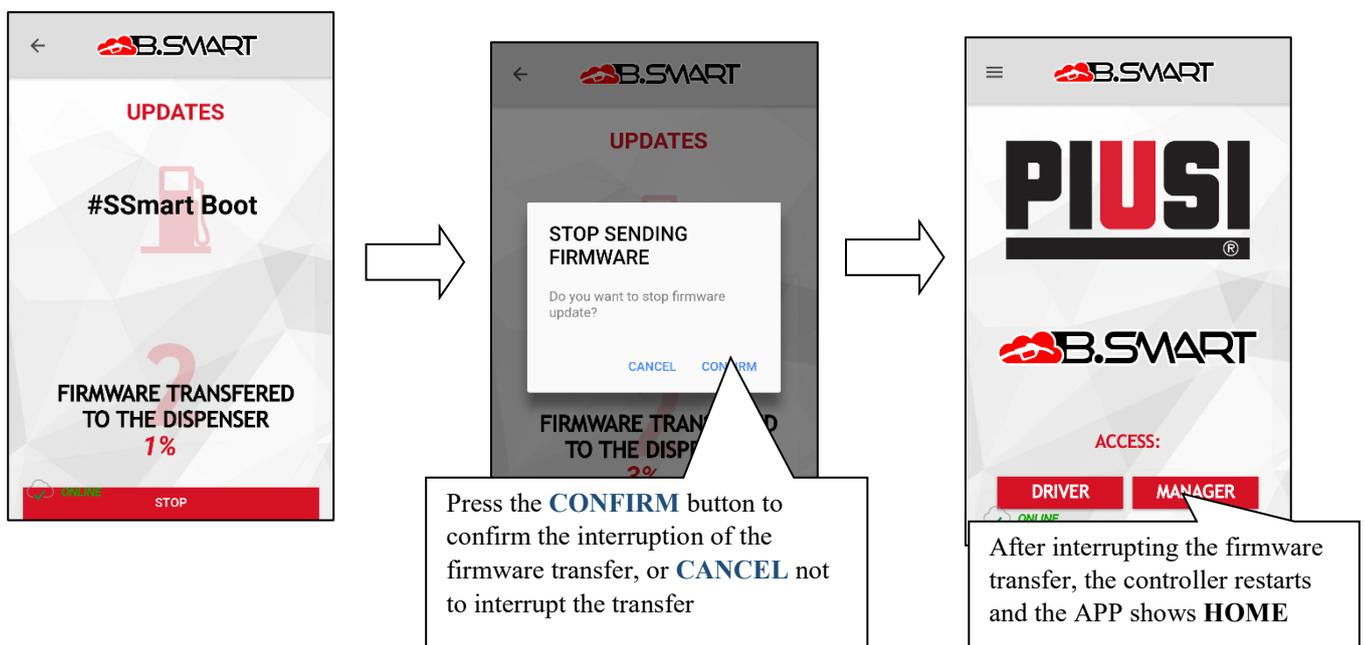

After all data has been transferred, the controller installs the firmware, restarts and connects to the smartphone

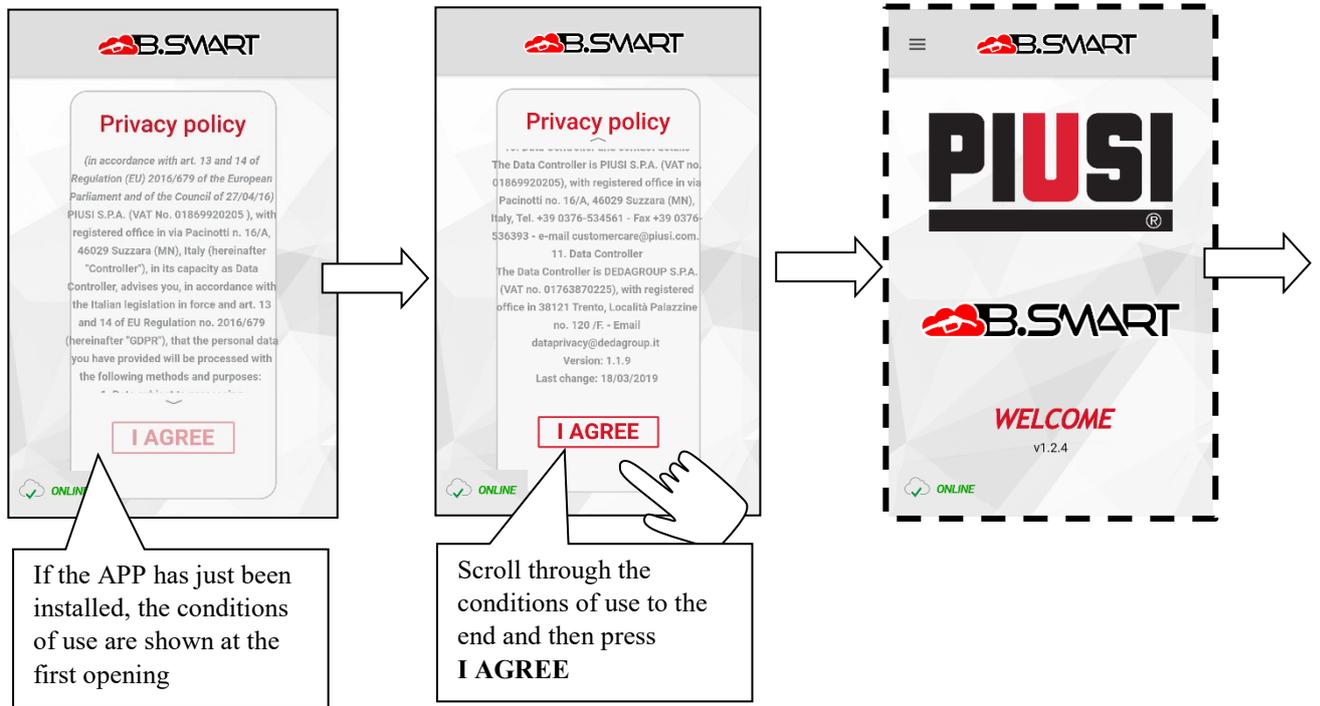

The firmware update can be interrupted at any time by pressing the **STOP** button

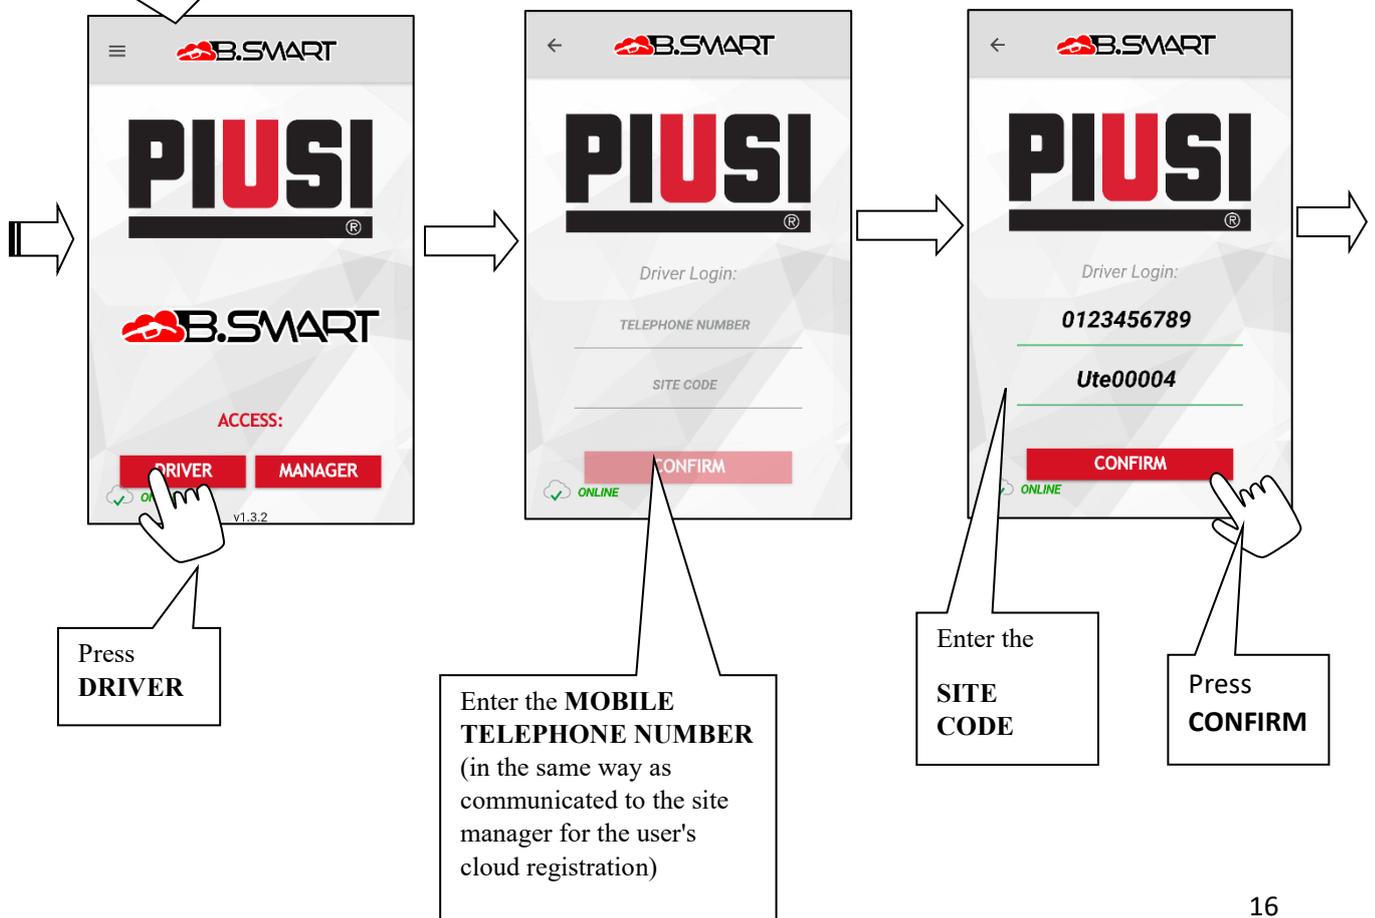

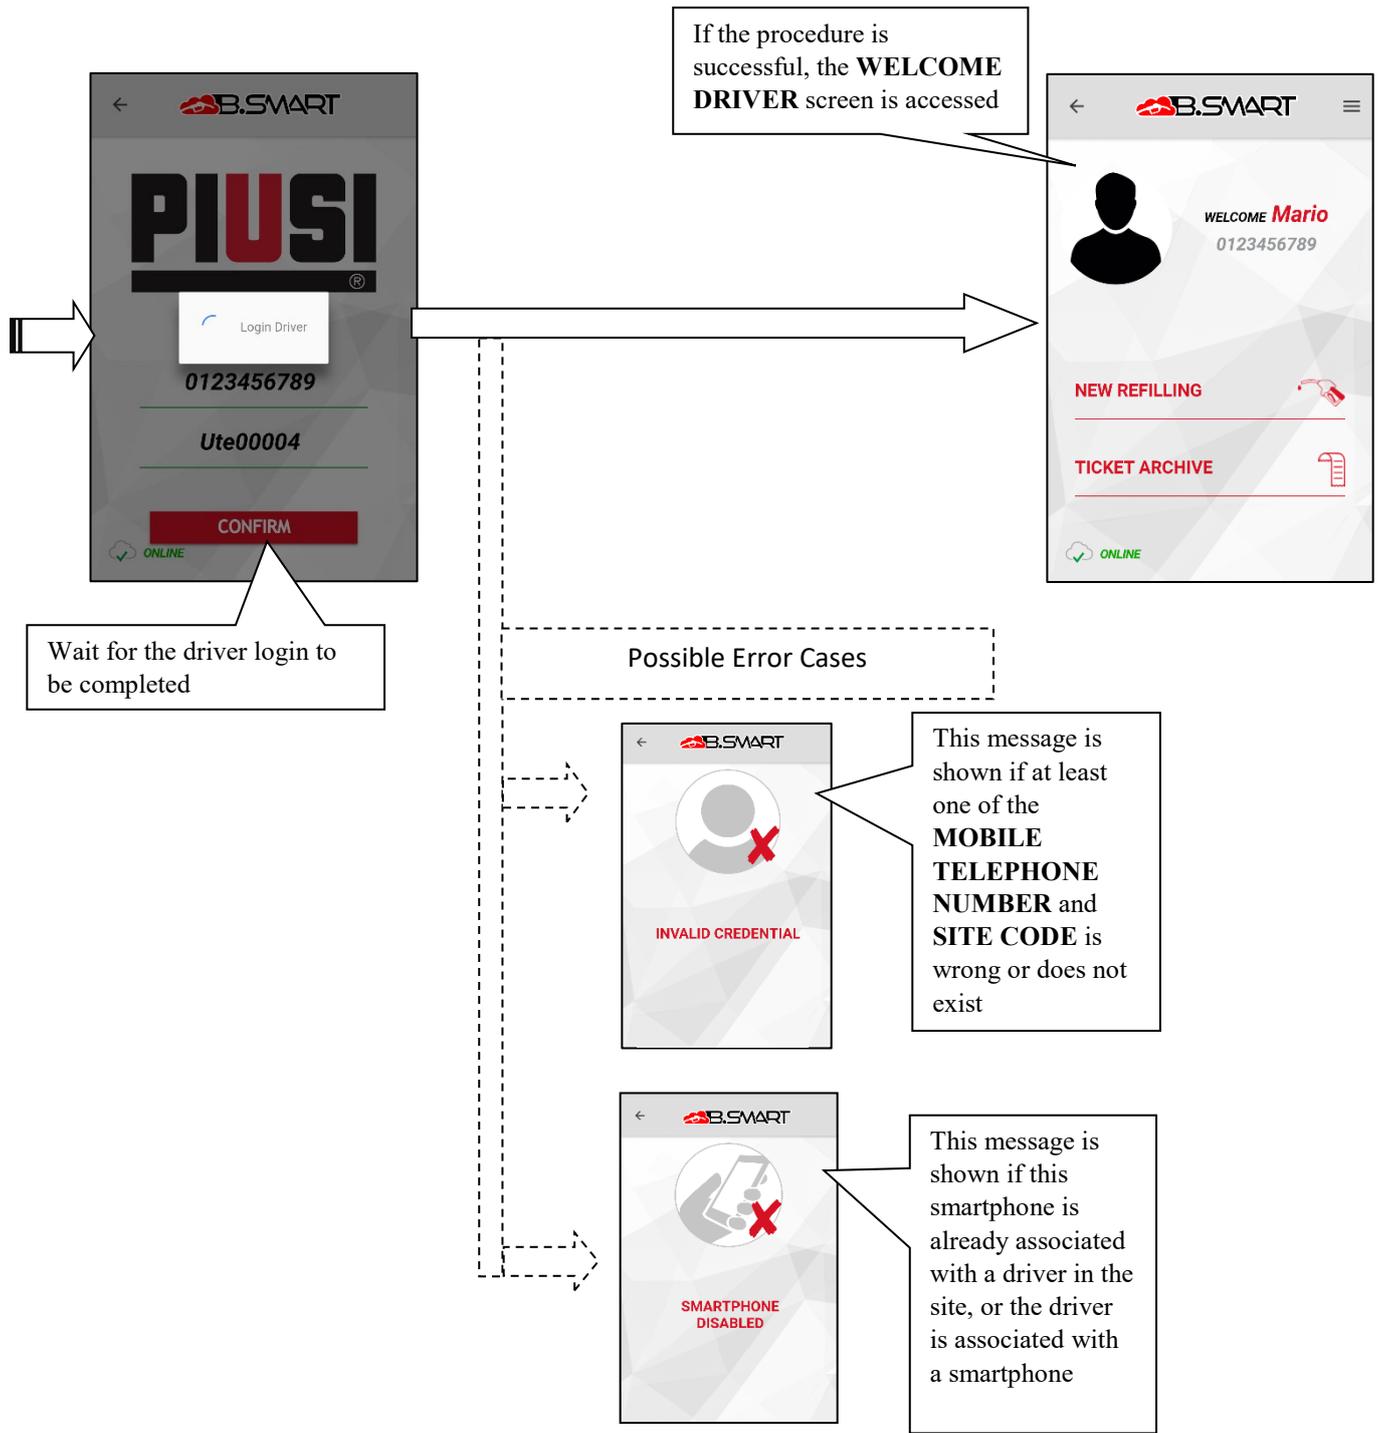

3. Driver

a. Authentication

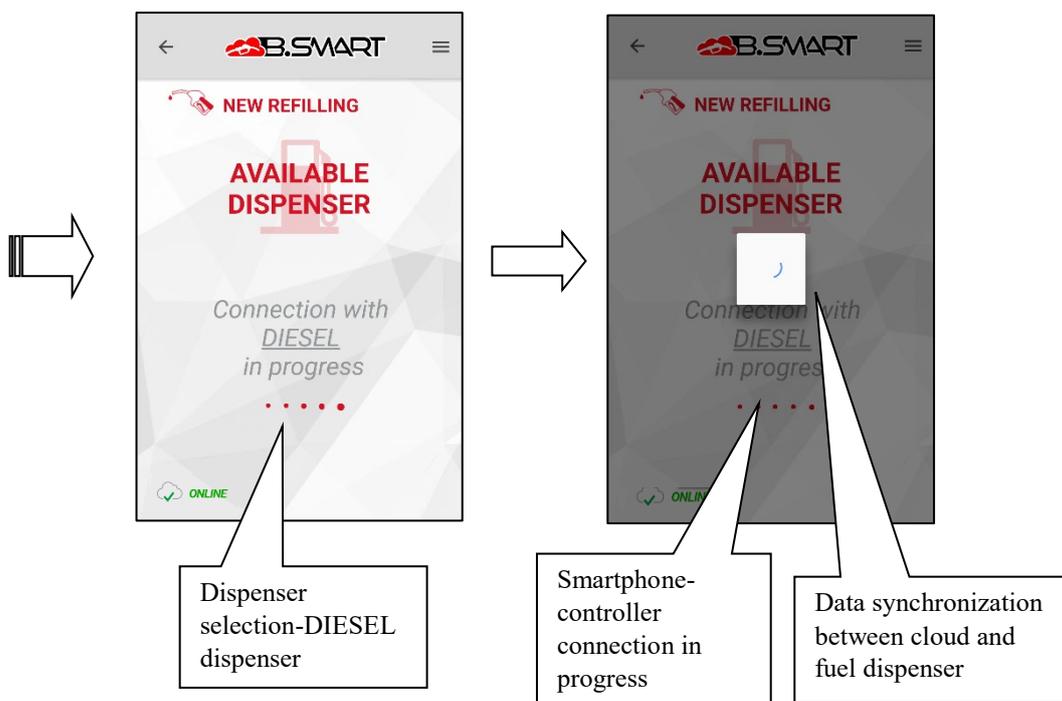

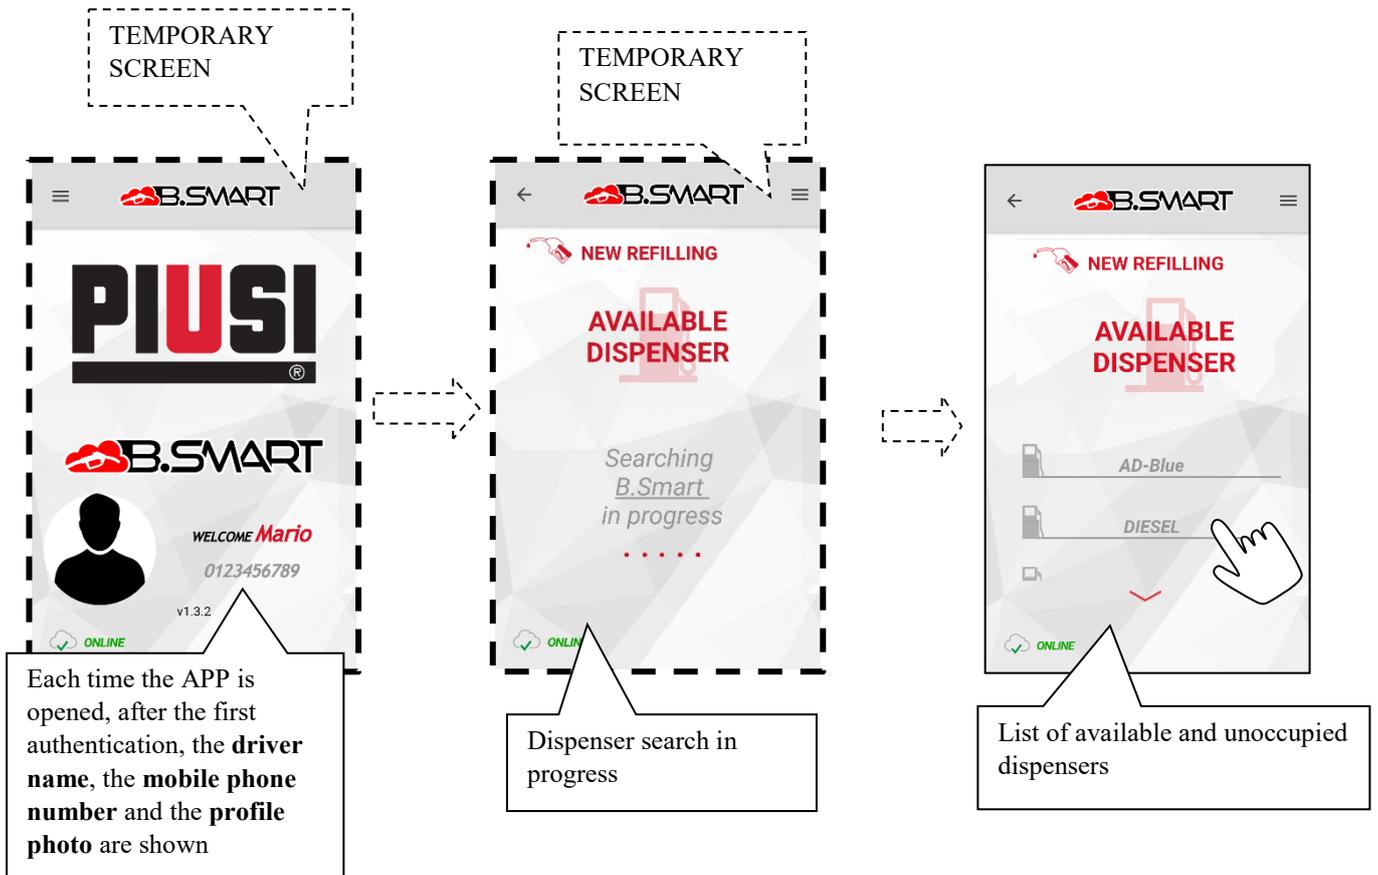

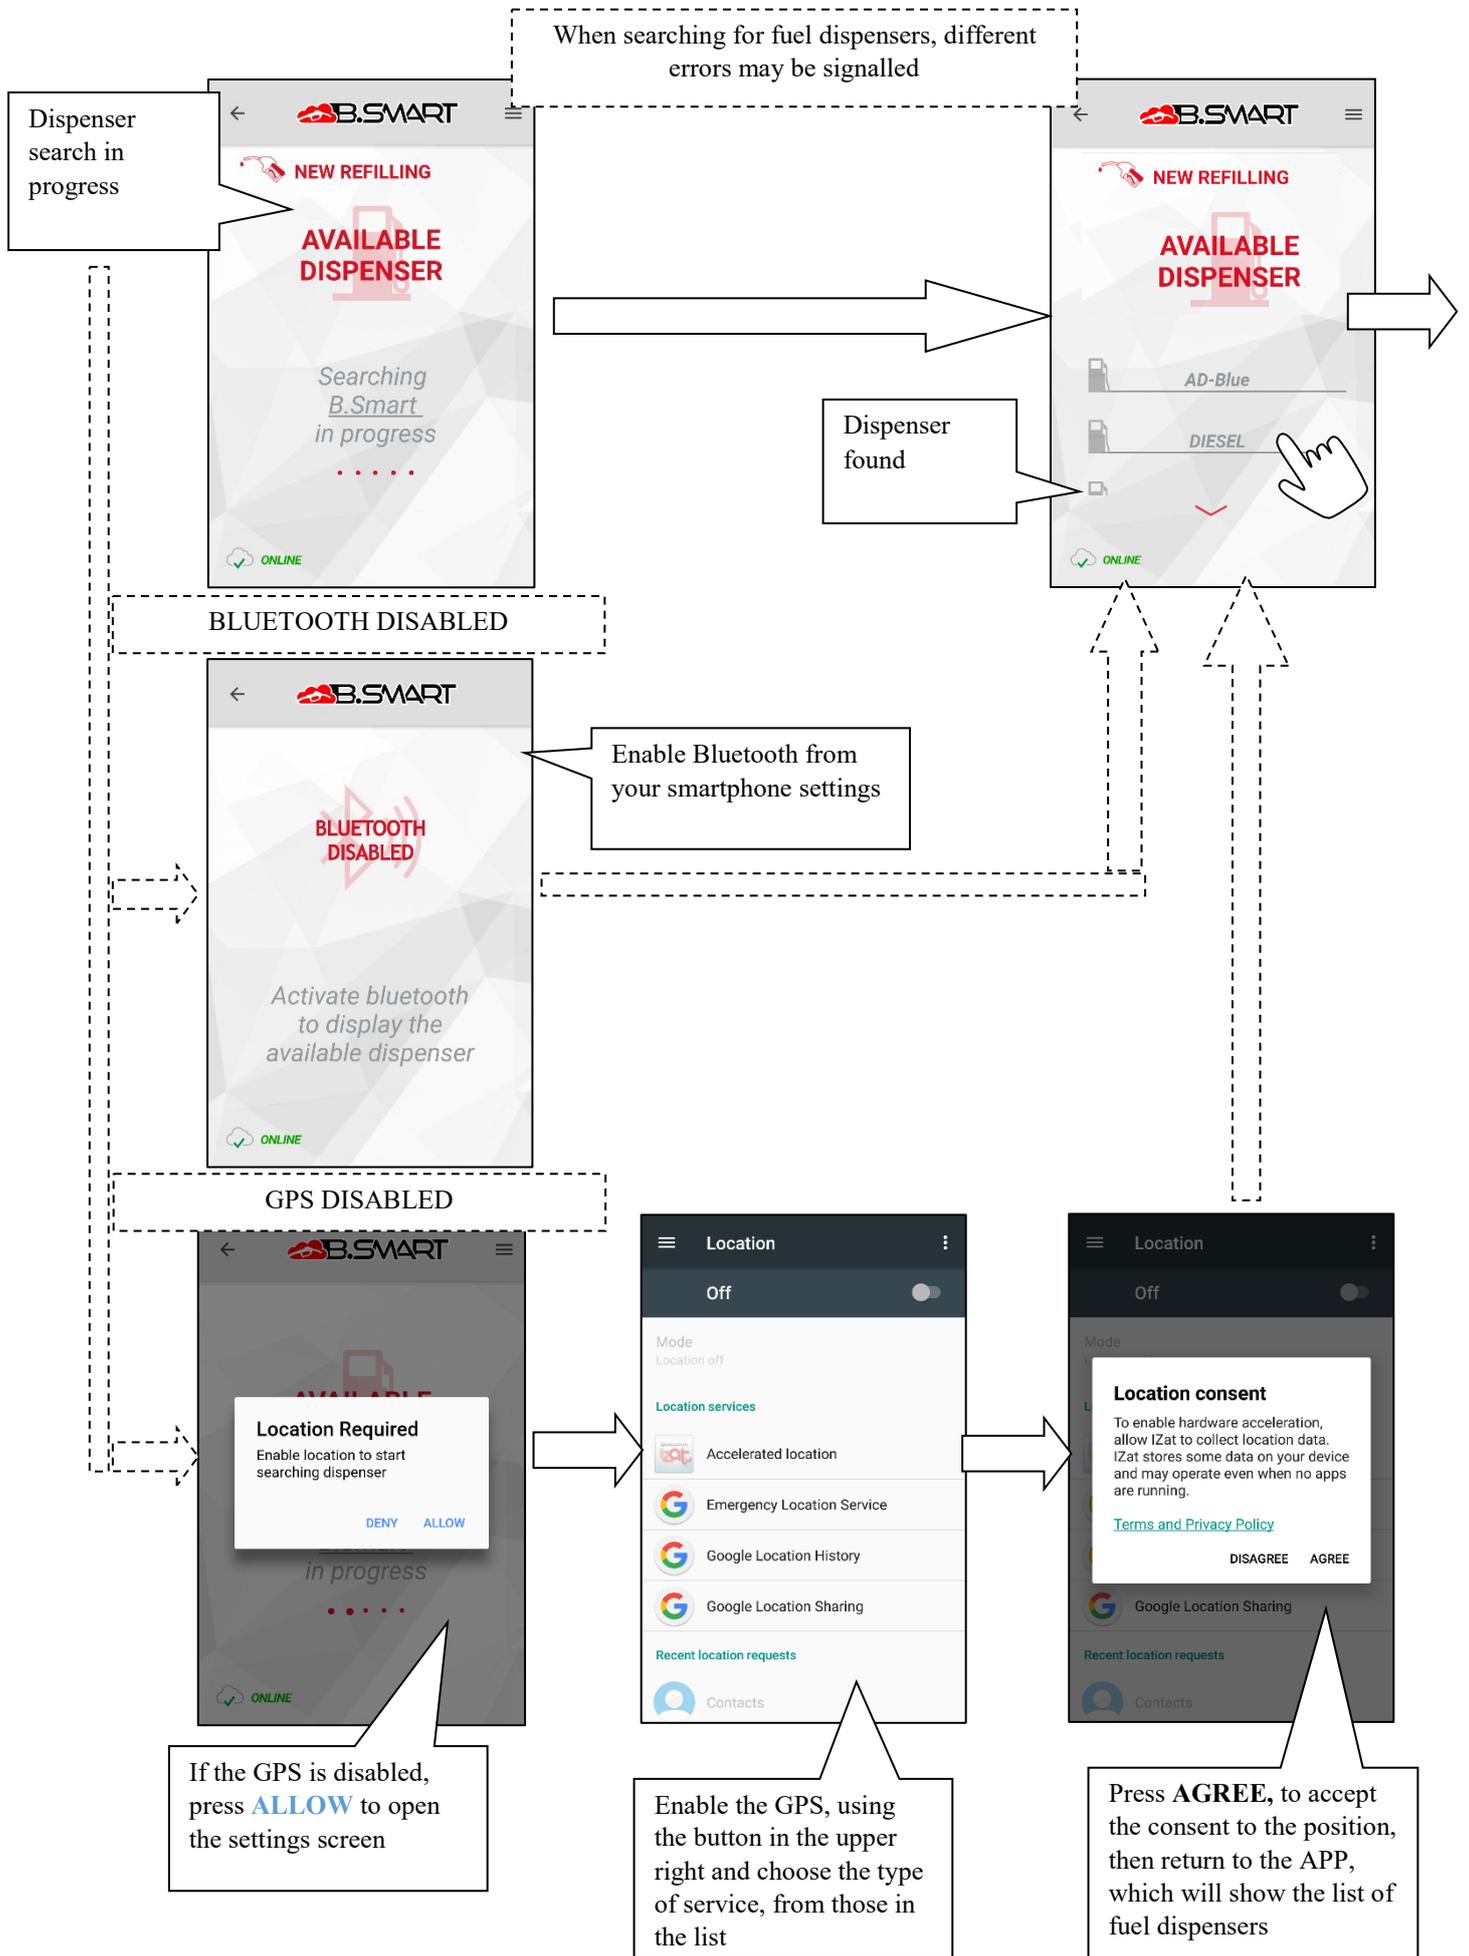

Welcome start screen

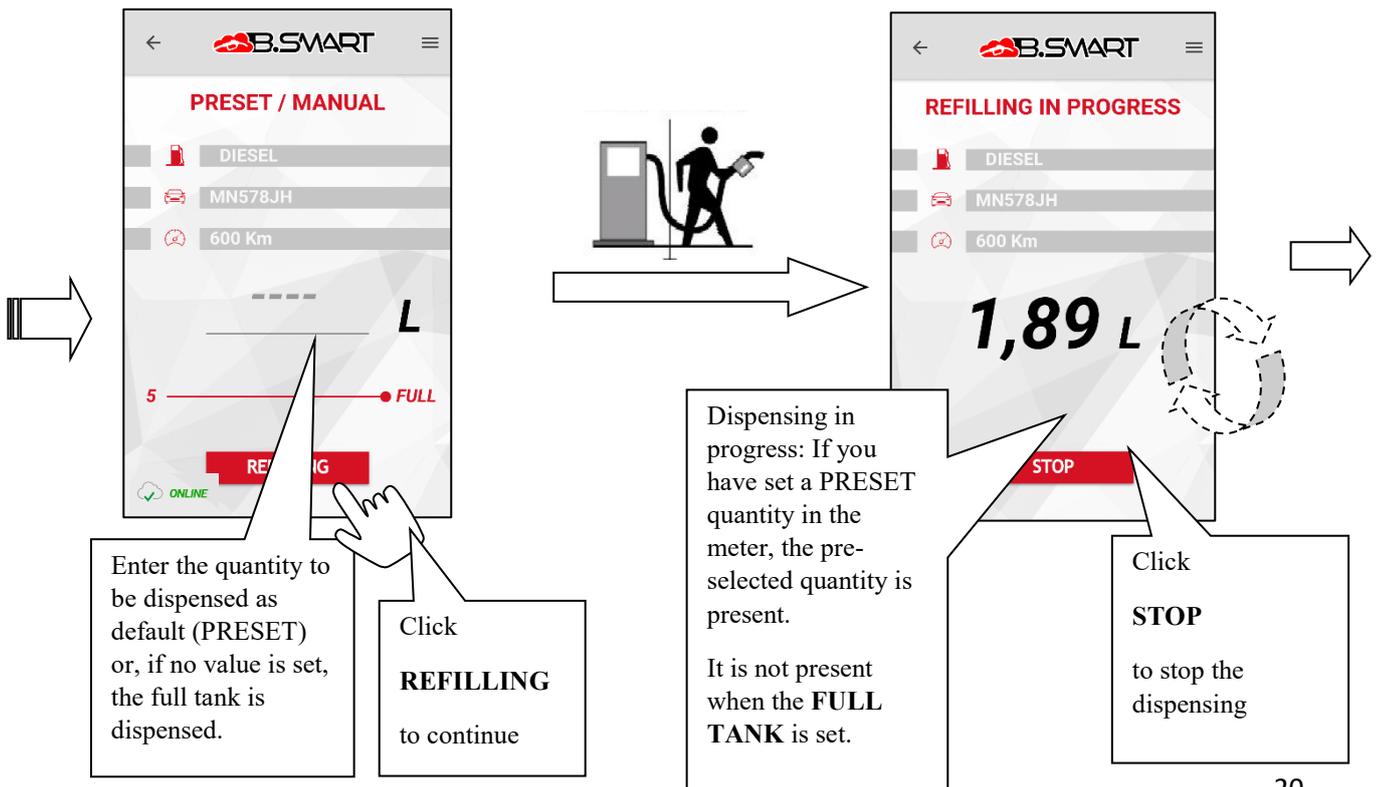

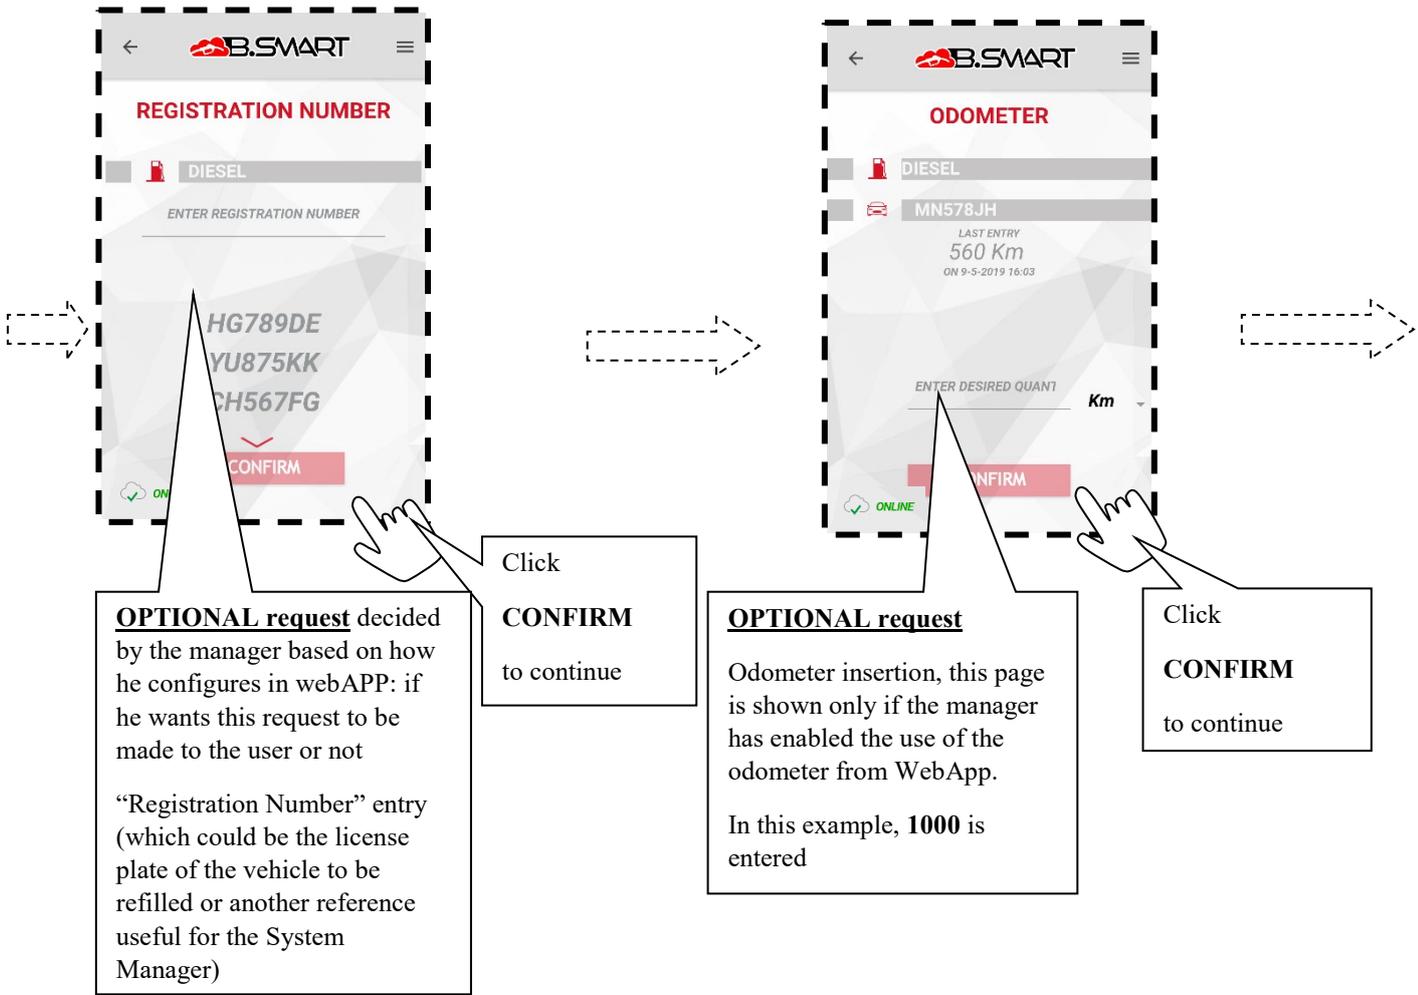

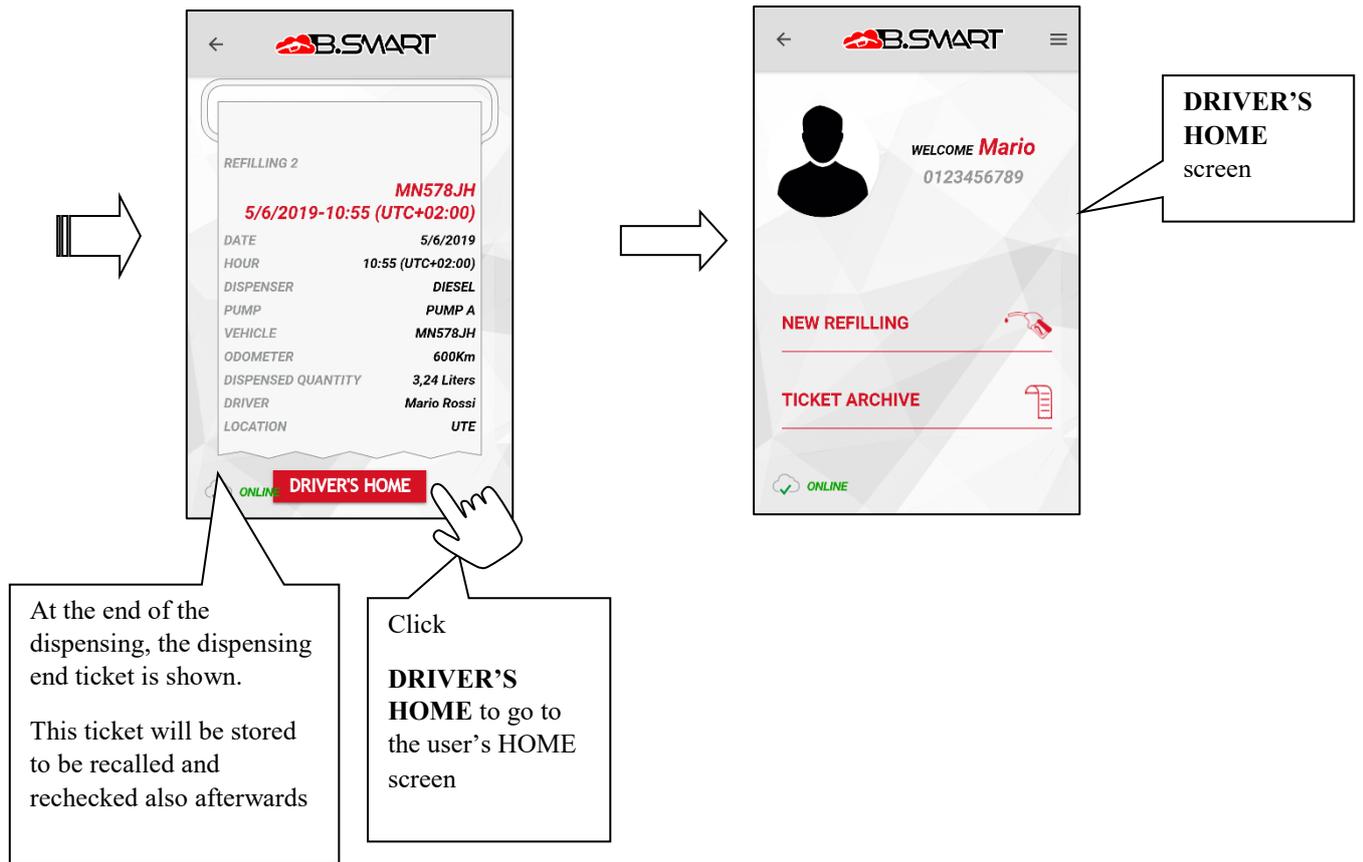

b. Dispensing

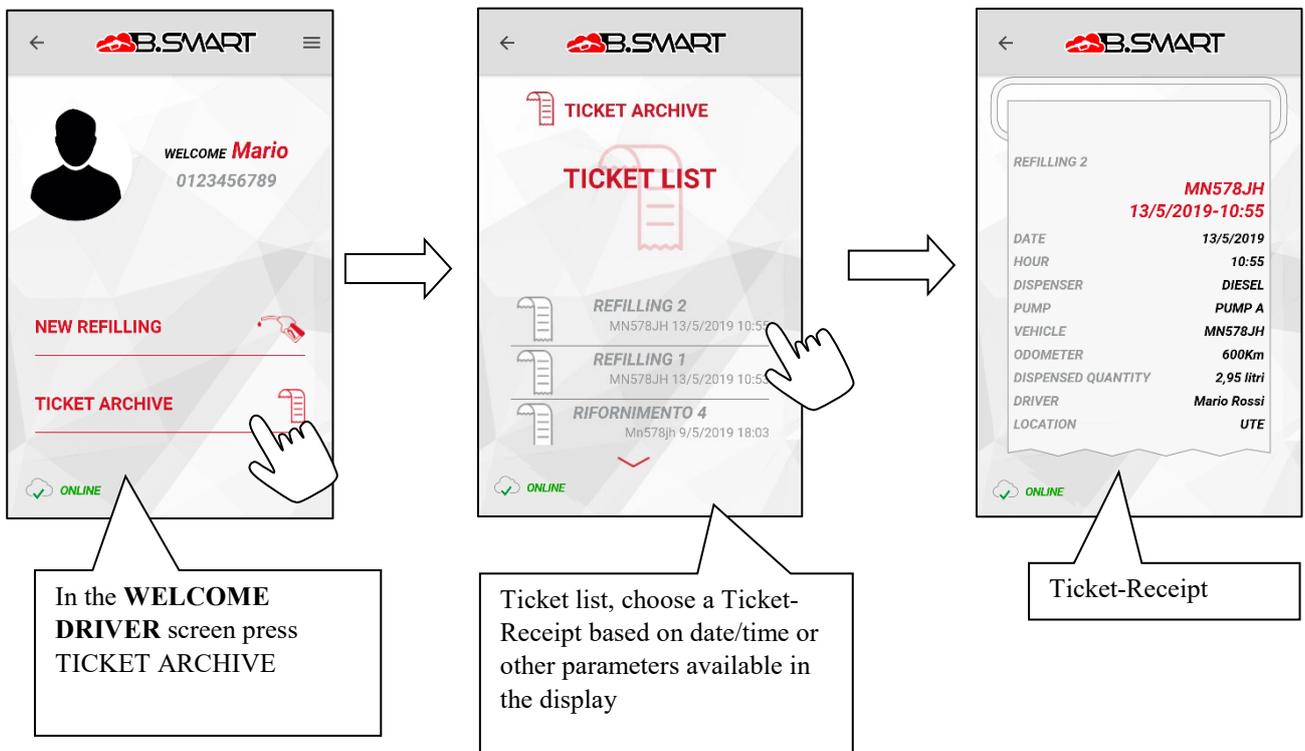

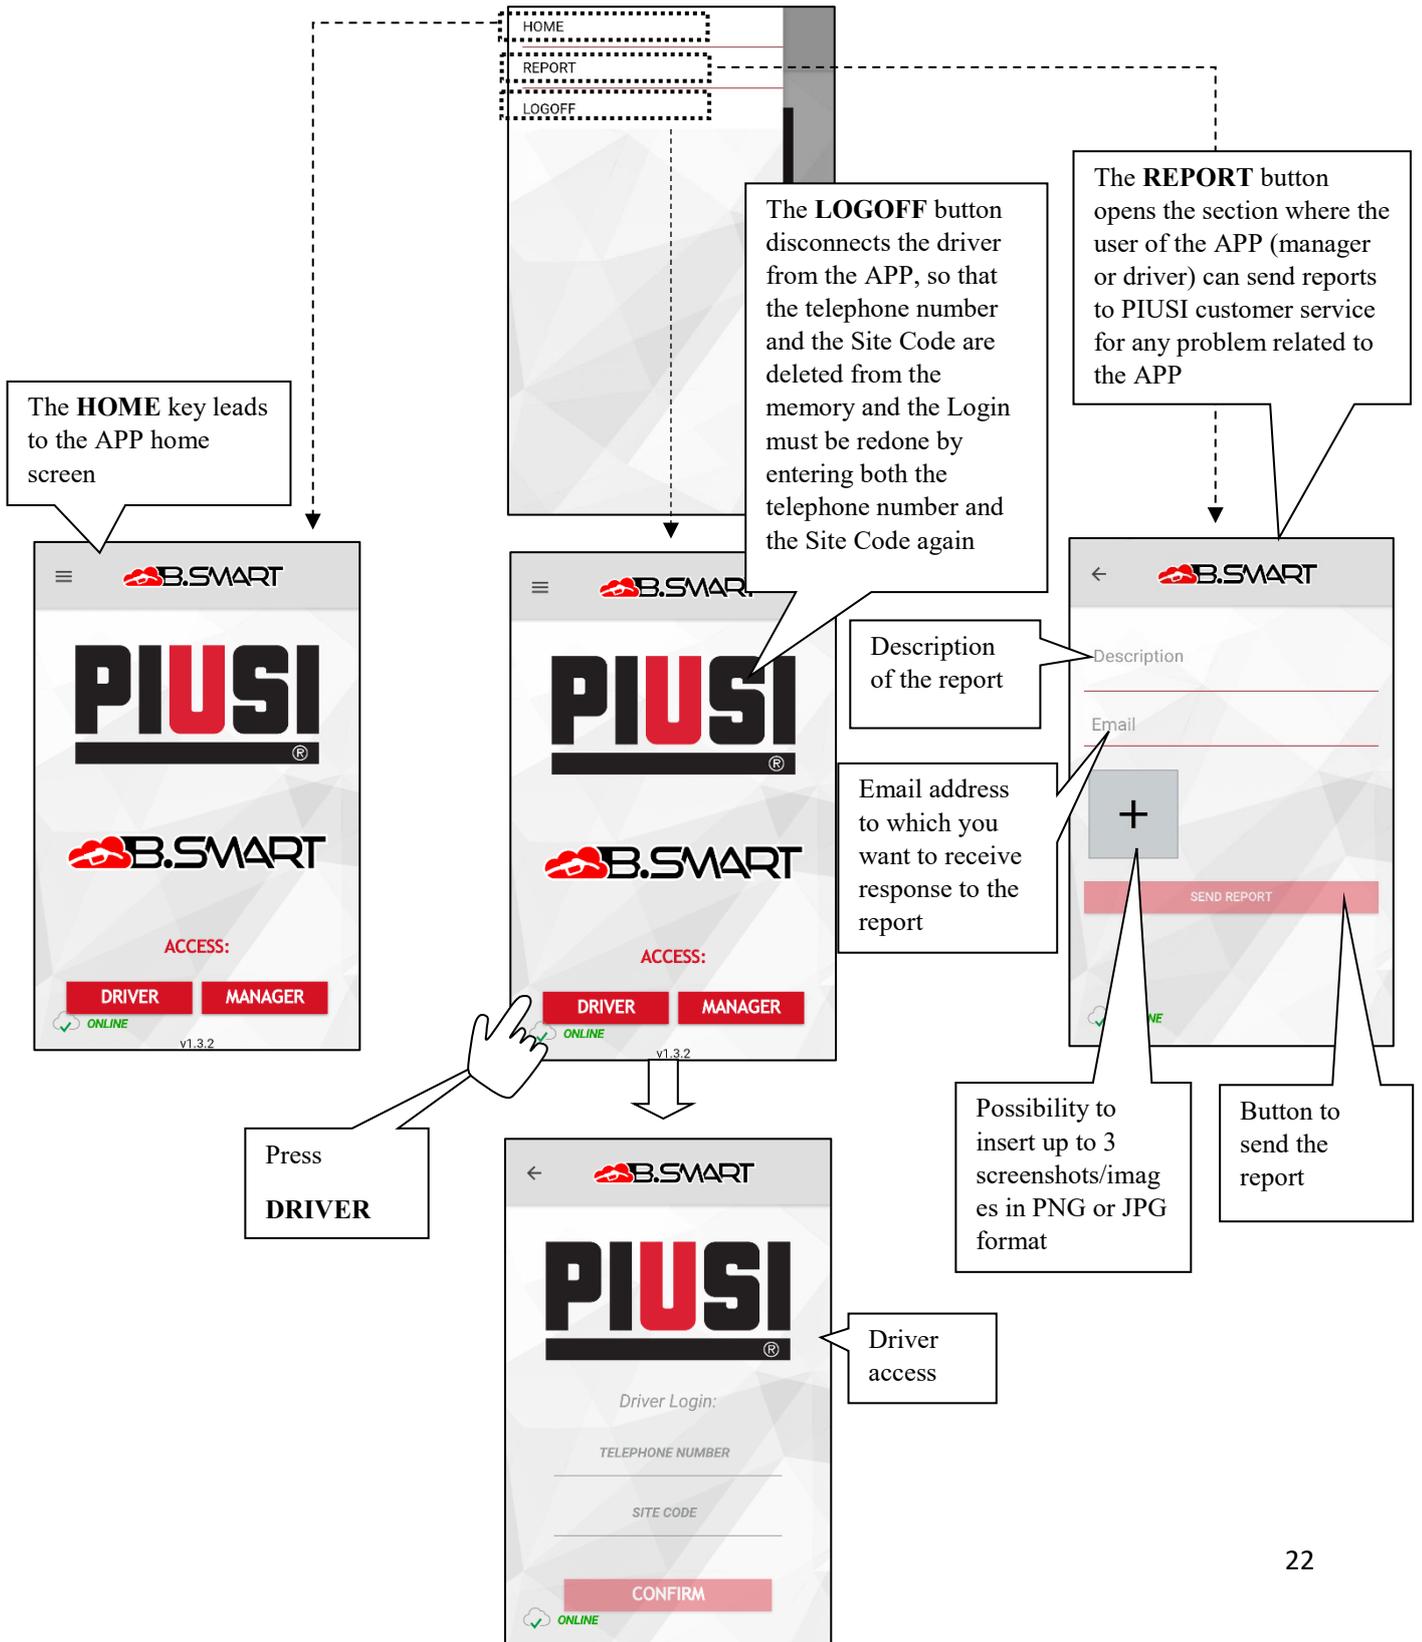

c. Ticket archive

4. Other functions

a. Side menu

In the various screens of the APP, a side pop-up menu can always be accessed by the button  this menu allows various operations:

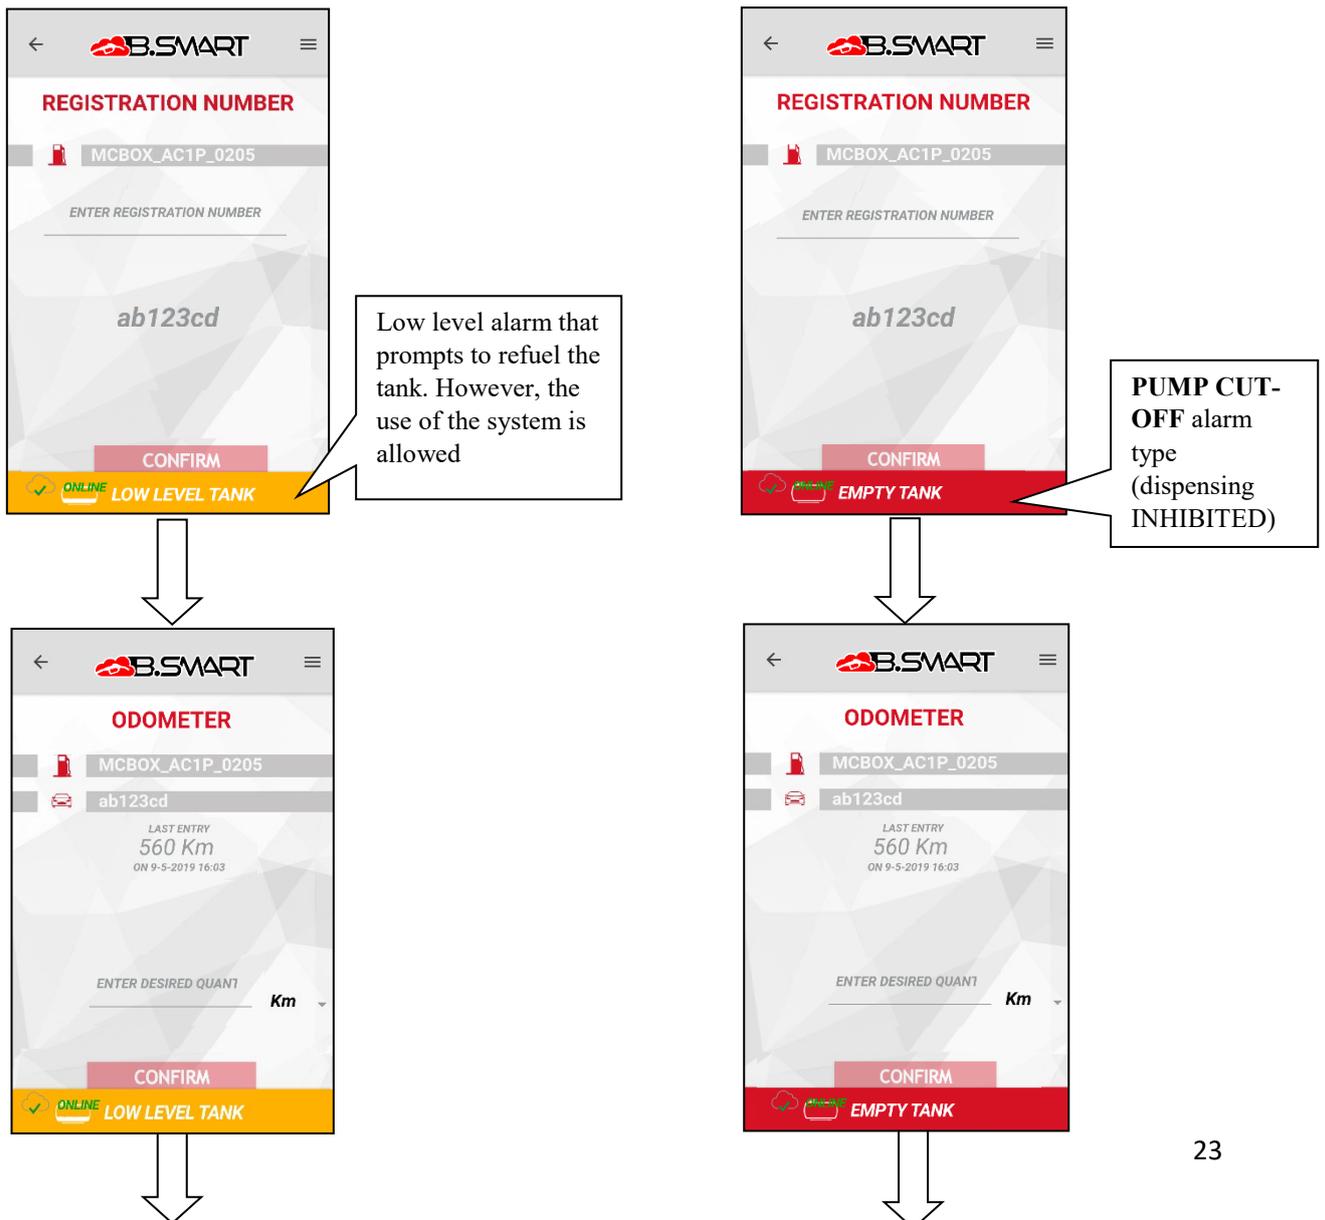

b. Fuel level alarms

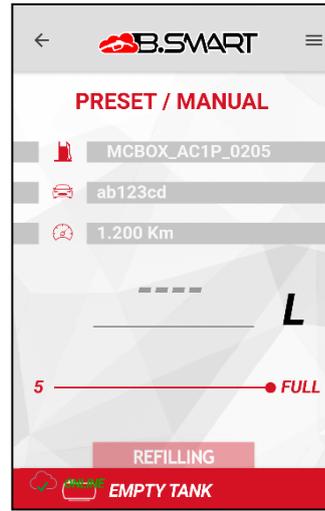

Level alarms are hardware alarms, especially voltage-free contacts, that can be installed on the tank and connected to the terminals of the controller. The alarm status of the contacts is communicated both on the controller and on the APP and on the WebAPP. The contact status indicates whether the tank has a low fuel level or is empty, by means of the WARNING or PUMP CUT-OFF status. They are configured via WebApp (see *WebApp manual*).

When a level contact is activated, the label indicating low fuel level (WARNING type alarm) or empty tank (PUMP CUT-OFF type alarm) is shown in all the dispensing screens.

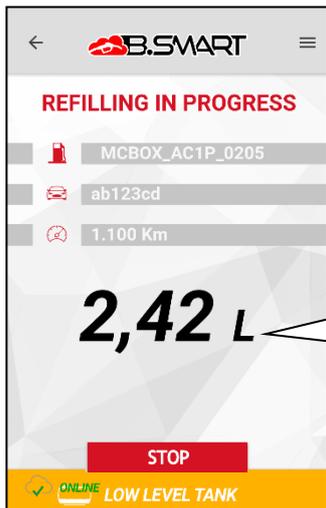

In case of low fuel level it is possible to dispense, in case of empty tank it is not possible to dispense.

The controller also provides an indication of the status of the Level contacts by means of the red LED (flashing with code U7 for simple ALARM while red fixed with code A1, A2, A3, A4, A6 shown on the display for inhibited dispensing and pump cut-off)

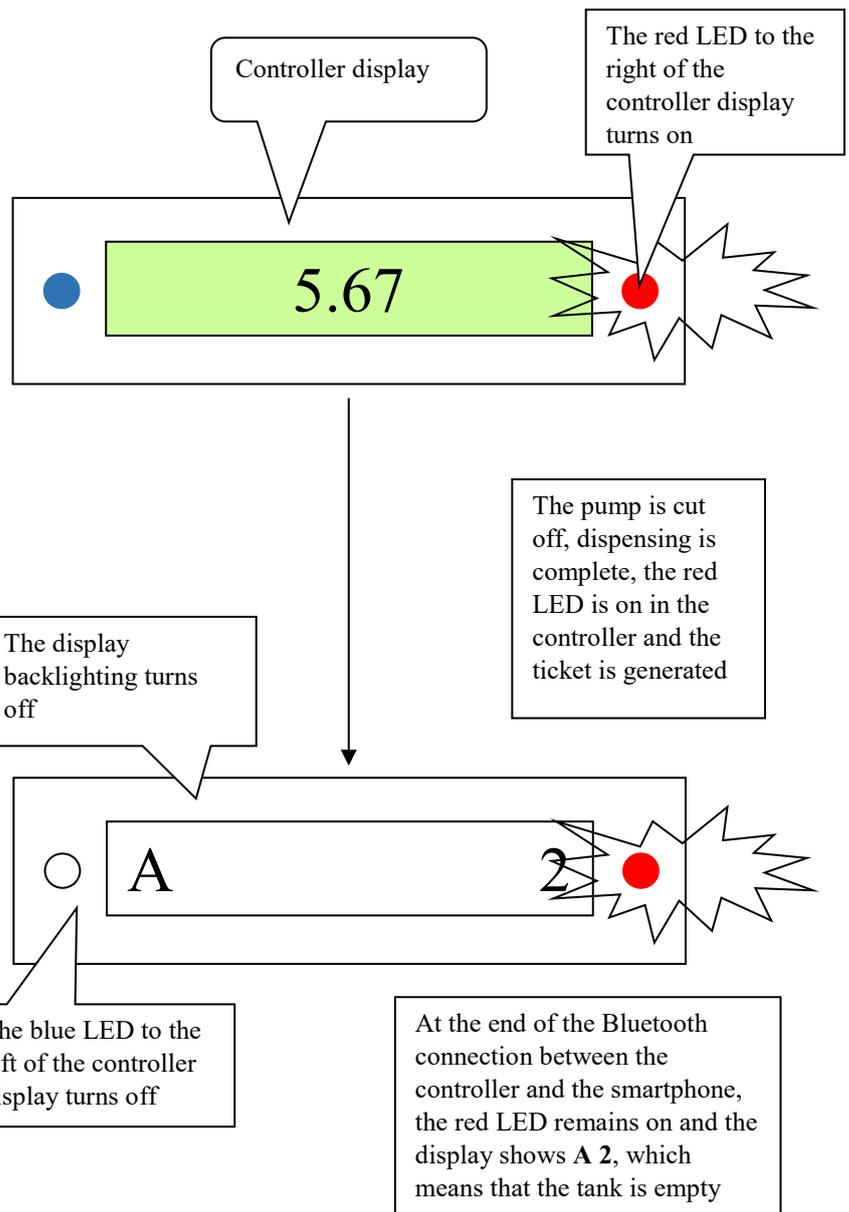

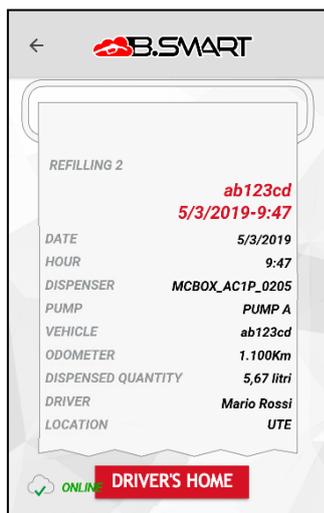

If the tank is empty, the REFILLING button is inhibited (shown in light colour)
Dispensing is not possible

If the tank is completely emptied during dispensing and the second level contact is enabled, the pump will be cut off, the RED LED on the controller will be lit, the dispensing will be stopped and the ticket will be shown

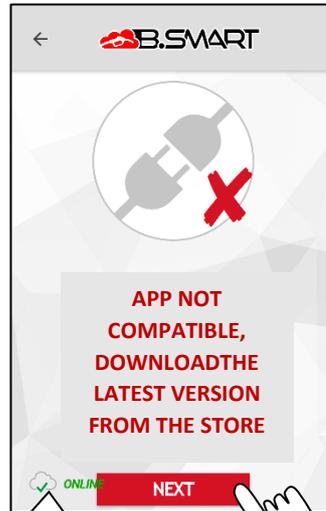

c. ERROR / FAILURE statuses signalled by the APP

WEBAPP IN MAINTENANCE

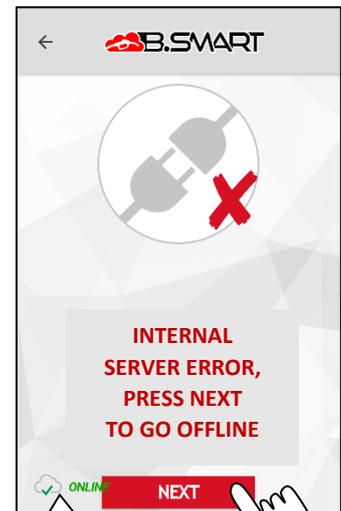

WebApp/Cloud is in maintenance, so you cannot perform any data synchronization between cloud and APP.
Press **NEXT** to go offline

APP NOT COMPATIBLE

The APP is not compatible with WebApp, you must update to continue.
Press **NEXT** to go offline

INTERNAL SERVER ERROR

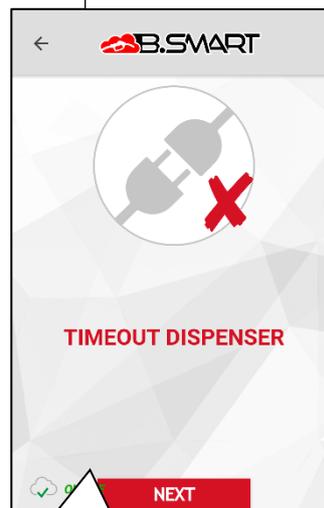

There was an error between APP and cloud, no data synchronization occurred.
Press **NEXT** to go offline

CONNECTION WITH CLOUD TIMEOUT

The cloud did not respond to APP requests, no data synchronization took place.
Press **NEXT** to go offline

TIMEOUT DISPENSER

To exit from here, press  to return to the screen of the FUEL dispensers, or close and reopen the APP

When the APP loses the Bluetooth connection with the controller, it shows the following screen (manager and driver). In this case the blue LED of the controller turns off.

DRIVER NOT ASSOCIATED WITH THE CONTROLLER
